

## SUBSCRIPTION RATES

Subscription rates (post free) for volume 38 (2001) of the *Journal of Applied Probability* are as follows:

US\$238.50; \$A376.35; £145.50 for libraries and institutions;

US\$79.50; \$A125.45; £48.50 for individuals belonging to a recognised scientific society.

Members of the London Mathematical Society should apply direct to the Secretary of the Society for copies of the *Journal*.

Please send all enquiries to: Applied Probability, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK.

We can provide back issue prices on application. Cheques, money orders, etc. should be made out to APPLIED PROBABILITY. Payment is accepted in US, UK or Australian currency or by VISA or Mastercard (phone: +44 114 222 3922; fax: +44 114 272 9782).

## NOTES FOR CONTRIBUTORS

Papers published in the *Journal* are of two kinds:

(1) *research papers* not exceeding 20 printed pages;

(2) *short communications* of a few printed pages in the nature of notes or brief accounts of work in progress.

*Review papers*, *longer research papers* and *letters to the editor* are published in *Advances in Applied Probability*, a companion journal. (Note: Letters relating specifically to papers which have appeared in the *Journal of Applied Probability* will continue to appear in the *Journal*.)

The editors may publish accepted papers in either journal, according to the space available, in order to meet the 15-month deadline in publication referred to below.

### Submission of papers

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Papers will not be reprinted without the written permission of the Trust. It is the policy not to accept for publication papers which cannot appear in print within 15 months of the date of receipt of the final version. Fifty reprints of each paper will be provided free; additional reprints are available at cost.

Papers should be written in English or French; papers in other languages may be accepted by the editors, but will appear (subject to the author's agreement) in English or French translation. Please supply *three* double-spaced hard copies, at least one of which should be printed on one side of the paper only. The paper should include: (1) a short abstract of approximately 4–10 lines giving a non-mathematical description of the subject matter and results; (2) list of keywords detailing the contents for the purpose of computerised information retrieval; (3) primary and secondary classifications according to the 2000 Mathematics Subject Classification.

Authors are advised to consult *The Author's Guide to the Applied Probability Journals* when preparing papers for submission. A copy of this guide may be obtained free of charge from the Applied Probability Office. An updated version of the guide, with LATEX style files, can be obtained in electronic form on <http://www.appliedprobability.org> or on PC-compatible disk from the Applied Probability Office.

For efficiency in processing, authors are requested to send all submissions to the Applied Probability Office in Sheffield, rather than to individual editors. The address for all submissions is:

**Executive Editor, Applied Probability, School of Mathematics and Statistics,  
University of Sheffield, Sheffield S3 7RH, UK.**

## COPYRIGHT

The copyright of all published papers is vested in the Trust. When a paper is accepted for publication, the Trust asks the author(s) to assign copyright to the Trust by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of \$00.70 per copy, plus .20 per page is paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021-9002/01 \$00.70+ .20.

*Research Papers*

- 609 OFFER KELLA AND MASAKIYO MIYAZAWA. Parallel fluid queues with constant inflows and simultaneous random reductions
- 621 DAVID ALDOUS, MASAKIYO MIYAZAWA AND TOMASZ ROLSKI. On the stability of a batch clearing system with Poisson arrivals and subadditive service times
- 635 I. KIPOURIDIS AND G. TSAKLIDIS. The size order of the state vector of a continuous-time homogeneous Markov system with fixed size
- 647 XIN GUO AND LARRY SHEPP. Some optimal stopping problems with nontrivial boundaries for pricing exotic options
- 659 ZHIQIANG ZHANG AND HOWELL TONG. On some distributional properties of a first-order nonnegative bilinear time series model
- 672 ALFRED MÜLLER AND LUDGER RÜSCHENDORF. On the optimal stopping values induced by general dependence structures
- 685 MARINA ALEXANDERSSON. On the existence of the stable birth-type distribution in a general branching process cell cycle model with unequal cell division
- 696 PAULINE COOLEN-SCHRIJNER AND ERIK A. VAN DOORN. On the convergence to stationarity of birth–death processes
- 707 JEWGENI H. DSHALALOW. Time dependent analysis of multivariate marked renewal processes
- 722 G. MERCANKOSK, G. M. NAIR AND W. J. SOET. Combinatorial techniques for  $M/G/1$ -type queues

*Short Communications*

- 737 ILAN ADLER AND SHELDON M. ROSS. The coupon subset collection problem
- 747 FÉLIX BELZUNCE, EVA M. ORTEGA AND JOSÉ M. RUIZ. A note on stochastic comparisons of excess lifetimes of renewal processes
- 754 RICHARD COWAN. A new discrete distribution arising in a model of DNA replication
- 761 NADER EBRAHIMI. A stochastic covariate failure model for assessing system reliability
- 768 RUDOLF GRÜBEL AND ANKE REIMERS. On the total time spent in records by a discrete uniform sequence
- 776 DAVID M. HULL. A reconsideration of Lotka's extinction probability using a bisexual branching process
- 781 OFFER KELLA AND WOLFGANG STADJE. On hitting times for compound Poisson dams with exponential jumps and linear release rate
- 787 NELLY LITVAK. Some peculiarities of exponential random variables
- 793 NAOTO MIYOSHI. On the stationary workload distribution of work-conserving single-server queues: a general formula via stochastic intensity
- 799 RALPH NEININGER. Rates of convergence for products of random stochastic  $2 \times 2$  matrices
- 807 M. S. SGIBNEV. An asymptotic expansion for the expectation of an age-dependent branching process with a submultiplicative estimate of the remainder
