

# JOURNAL of the AUSTRALIAN MATHEMATICAL SOCIETY

## Series A — Pure Mathematics and Statistics Volume 50 Part 2 APRIL 1991

|   |   |     |
|---|---|-----|
| RICHARD C. VREM                                     | <i>Independent sets and lacunarity for hypergroups</i>  | 171 |
| DAVID E. BLAIR                                      | <i>Critical associated metrics on contact manifolds III</i> . . . . .   | 189 |
| S. K. JAIN, S. R. LOPEZ-PERMOUTH and S. TARIQ RIZVI | <i>A characterization of uniserial rings via continuous and discrete modules</i> . . . . .  | 197 |
| ZOLTÁN FÜREDI                                       | <i>On <math>r</math>-graphs and <math>r</math>-multihypergraphs with given maximum degree</i> . . . . .                                       | 204 |
| MARY SCHAPS   | <i>Integral and <math>p</math>-modular semisimple deformations for <math>p</math>-solvable groups of finite representation type</i> . . . . . | 213 |
| ANTONIO GALBIS                                      | <i>On weighted inductive limits of spaces of Fréchet-valued continuous functions</i> . . . . .  | 233 |
| RÜDIGER GÖBEL                                       | <i>Abelian groups with small cotorsion images</i> .   | 243 |
| C. H. C. LITTLE and F. RENDL                        | <i>Operations preserving the Pfaffian property of a graph</i> . . . . .   | 248 |
| KATSUYA ISHIZAKI                                    | <i>Admissible solutions of the Schwarzian differential equation</i> . . . . .   | 258 |
| C. J. MAXSON and A. P. J. VAN DER WALT              | <i>Centralizer near-rings over free ring modules</i> .  | 279 |
| CHERYL E. PRAEGER                                   | <i>Kronecker classes of field extensions of small degree</i> . . . . .  | 297 |
| H. HEATHERLY and G. PILZ                            | <i>On the structure of tame near-rings</i> . . . . .  | 316 |
| ALICE ANN MILLER                                    | <i>A subspace theorem for ordinary linear differential equations</i> . . . . .  | 320 |
| C. M. JOSHI and S. K. BISSU                         | <i>Some inequalities of Bessel and modified Bessel functions</i> . . . . .  | 333 |

## THE JOURNAL

The Journal of the Australian Mathematical Society began publication in 1959, and from 1975 has appeared in two series, Series A (Pure Mathematics and Statistics) and Series B (Applied Mathematics). Information about Series B may be found on the inside back cover.

### Series A, Pure Mathematics and Statistics

Submission of research papers in pure mathematics and mathematical statistics is invited. Authors intending to submit papers for publication should prepare the typescript following the instructions below, and should send two complete copies to the Editor, or to an appropriate Associate Editor (see back cover of this issue).

Two volumes of three parts each are planned for 1991. These are Volume 50 and Volume 51. The annual subscription price to non-members is A\$205.00 (US\$160.00) for 1991.

### PREPARATION OF TYPESCRIPTS

1. The author should keep a complete copy of the submitted article; the Society will not accept responsibility for any loss.

2. Each typescript should include (i) an abstract of not more than 150 words, preferably containing no formulae, and certainly containing no complicated formulae and no references, (ii) a 1991 Mathematics subject classification (Amer. Math. Soc.), (iii) if the title is long, a shortened form of it, no more than forty characters in length, including spaces.

3. The article should be typed or photocopied on high quality A4 or quarto bond paper, on one side only, with at least double spacing, and with a generous margin (at least 3 cm) all around.

4. The conventions of *A manual for authors of mathematical papers* published by the American Mathematical Society should be observed. Two alternative styles for references and quotations are described below. Authors are requested to use one and only one style consistently throughout their typescript.

STYLE 1. A typical reference in the list of references would be

T. M. Cherry (1965), "Infinite linear systems with homogeneous kernel of degree  $-1$ ", *J. Austral. Math. Soc.* 5, 129–168.

A corresponding reference in the text would be: Cherry (1965), p. 155.

STYLE 2. A typical reference in the list of references would be

[3] L. Grüşchen, "Pseudo-quasi-ergodic theorems", *J. Austral. Math. Soc.* 4 (1960), 2–3.

A corresponding reference in the text would be: Grüşchen [3]; or ([3], [4], [9]); or Grüşchen [2, 3]; or Grüşchen [3, Theorem 1].

In either style, the list of references should be in alphabetical order of surnames of first authors.

5. Explain clearly what symbols are to be set in special typefaces (such as cursive, fraktur, script, bold) and what is required with any unusual symbols (which should wherever possible be chosen from symbols available to the printer).

6. Avoid abbreviations, such as Thm., Prop., Ex., iff, i.e., e.g.,  $\forall$ ,  $\exists$ ,  $\Rightarrow$ , and  $\Leftrightarrow$ .

7. Authors should provide diagrams (except for category theory type diagrams), drawn to professional standards.

8. Authors are encouraged to submit their papers in  $\text{\LaTeX}$ .

*Journal of the Australian Mathematical Society, Series A — Pure Mathematics and Statistics*, is published bimonthly by the Australian Mathematical Society, c/-Department of Mathematics, University of Queensland, Qld. 4072, Australia. Second class postage is paid at Ann Arbor, Michigan 48106. Postmaster: Send address change notices to Dr B. D. Jones, Australian Mathematical Society, c/-Department of Mathematics, University of Queensland, Qld. 4072, Australia.
