

Subscription rates

Subscription rates for volume 47 (2015) of *Advances in Applied Probability* (AAP) are as follows (post free and including online access at <http://projecteuclid.org/aap/>): US\$344.00; A\$387.00; £222.00 for libraries and institutions; or US\$116.00; A\$131.00; £75.00 for individuals belonging to a recognised scientific society. The subscription rates for volume 52 (2015) of *Journal of Applied Probability*, the companion publication, are the same; if both journals are ordered directly from the Applied Probability office at the same time, the combined price is discounted by 10%. Please send all enquiries to: Applied Probability Subscriptions, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK (telephone +44 114 222 3922; fax +44 114 222 3926; email s.c.boyles@sheffield.ac.uk). Cheques, money orders, etc. should be made payable to 'Applied Probability'. Payment is acceptable in US, Australian or UK currency, or by Visa or Mastercard. We can provide back issue prices on application.

Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Editor-in-Chief on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP. The section on *stochastic geometry and statistical applications* is published separately in AAP for the last time in 2015. Submissions in the area remain welcome and will be treated as submissions for the general section.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the \LaTeX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as hard copy or as electronic files. All submissions will be acknowledged on receipt and **must be accompanied by a covering letter stating the author's postal address and affiliation**. Hard copy: Send **all** submissions to the Applied Probability office in Sheffield, and not to individual editors. Two copies of the paper, at least one of which should be double spaced, should be sent to: **Executive Editor, Applied Probability, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK**. Electronic submission: Please email a **double-spaced** PostScript™ (.ps) or portable document format (.pdf) file, not exceeding 1 Mb. **The files must be clearly identified by name in a separate covering message**. The address for email submissions is submissions_japaap@sheffield.ac.uk.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0001–8678/15

PRINTED IN NORTHERN IRELAND AT HISKEY LTD

Stochastic Geometry and Statistical Applications

- 1 VENKAT ANANTHARAM AND FRANÇOIS BACCELLI. Capacity and error exponents of stationary point processes under random additive displacements
- 27 STEFAN STEINERBERGER. New bounds for the traveling salesman constant

General Applied Probability

- 37 LOUIGI ADDARIO-BERRY AND TAO LEI. The mixing time of the Newman–Watts small-world model
- 57 MICHAEL GRINFELD, STANISLAV VOLKOV AND ANDREW R. WADE. Convergence in a multidimensional randomized Keynesian beauty contest
- 83 HIROYUKI MASUYAMA. Error bounds for augmented truncations of discrete-time block-monotone Markov chains under geometric drift conditions
- 106 FRANÇOIS DUFOUR AND ALEXEI B. PIUNOVSKIY. Impulsive control for continuous-time Markov decision processes
- 128 KAMILLE SOFIE TÅGHOLT GAD AND JESPER LUND PEDERSEN. Variance optimal stopping for geometric Lévy processes
- 146 HIRONOBU SAKAGAWA. Persistence probability for a class of Gaussian processes related to random interface models
- 164 GHURUMURUHAN GANESAN. Infection spread in random geometric graphs
- 182 DANIEL AHLBERG. Asymptotics of first-passage percolation on one-dimensional graphs
- 210 HONGZHONG ZHANG. Occupation times, drawdowns, and drawups for one-dimensional regular diffusions
- 231 DARYL J. DALEY, JOHAN S.H. VAN LEEUWAARDEN AND YONI NAZARATHY. BRAVO for many-server QED systems with finite buffers
- 251 A. L. STOLYAR. Diffusion scale tightness of invariant distributions of a large-scale flexible service system
- 270 XIAOHU LI AND YINPING YOU. Permutation monotone functions of random vectors with applications in financial and actuarial risk management
- 292 RICHARD ARRATIA AND STEPHEN DESALVO. On the random sampling of pairs, with pedestrian examples
