

Ownership and Publication of *Mathematika*

Mathematika was founded in the early 1950s by Harold Davenport and is owned by University College London. Since 2010, the journal has been published on behalf of its owner by the London Mathematical Society (LMS). The LMS celebrated its 150th anniversary in 2015; it is the major British learned Society for mathematics and publishes twelve other journals, five of which are in collaboration with other learned societies. Cambridge University Press prints and distributes *Mathematika* under agreement with the London Mathematical Society.

All articles are available electronically via Cambridge Journals Online.

Aims and Scope

Mathematika publishes both pure and applied mathematical articles of the highest quality. The traditional emphasis has been towards the purer side of mathematics but applied mathematics and articles addressing both aspects are equally welcome.

Submission of Manuscripts

Authors wishing to submit a paper for publication should follow the guidelines available via the webpage www.lms.ac.uk/publications.

Authors will be asked to assign copyright to University College London prior to publication.

No paper should have been published or be under consideration for publication elsewhere. Nor may the paper be submitted elsewhere while it remains under consideration by *Mathematika*.

Offprints

A URL giving free access to the final published article will be provided free of charge. Offprints can be ordered on the form which will accompany the page proofs.

Printed back numbers

Orders for volume 56 (2010) onwards should be sent to Cambridge University Press. Printed copies of volume 55 (2009) and earlier volumes are available from the Department of Mathematics, University College London. Please contact mathematika@math.ucl.ac.uk.

Copying

This journal is registered with the Copyright Clearance Centre, 222 Rosewood Drive, Danvers, MA 01923, USA. Organizations in the USA that are registered with the CCC may therefore copy material beyond the limits permitted by sections 107 and 108 of US copyright law subject to payment to CCC of the per-copy fee. This consent does not extend to multiple copying for promotional and commercial purposes. Code 0025-5793/2016.

Organizations authorized by the Copyright Licensing Agency may also copy material subject to the usual conditions. For all other use, permission should be sought from Cambridge or the American branch of Cambridge University Press.

Published by the London Mathematical Society on behalf of University College London.

This journal has been printed on FSC-certified paper and cover board. See www.fsc.org.

Typeset by Sunrise Setting Ltd, Paignton, UK.

Printed in the UK by Bell and Bain Ltd.

Mathematika

VOLUME 62 PART 1 2016

Salvatore Tringali Cauchy–Davenport type theorems for semigroups	1–12
Sam Chow Waring’s problem with shifts	13–46
Michael H. Mertens and Ken Ono Special values of shifted convolution Dirichlet series	47–66
Zev Klagsbrun and Robert J. Lemke Oliver The distribution of 2-Selmer ranks of quadratic twists of elliptic curves with partial two-torsion	67–78
Johannes Schleisitz On the spectrum of Diophantine approximation constants	79–100
Andriy Bondarenko and Kristian Seip Helson’s problem for sums of a random multiplicative function	101–110
Fritz Gesztesy , Steve Hofmann and Roger Nichols On stability of square root domains for non-self-adjoint operators under additive perturbations	111–182
M. M. Skriganov Dyadic shift randomization in classical discrepancy theory	183–209
Yulia Ershova , Irina I. Karpenko and Alexander V. Kiselev Isospectrality for graph Laplacians under the change of coupling at graph vertices: Necessary and sufficient conditions	210–242
E. Brian Davies and Eugene Shargorodsky Level sets of the resolvent norm of a linear operator revisited	243–265
Arnau Marsiglietti Concavity properties of extensions of the parallel volume	266–282
Ferenc Fodor , Daniel Hug and Ines Ziebarth The volume of random polytopes circumscribed around a convex body	283–306
Luis Rademacher A simplicial polytope that maximizes the isotropic constant must be a simplex	307–320
