

## 6. COMMISSION DES TELEGRAMMES ASTRONOMIQUES

PRÉSIDENT: M. A. A. Mikhailov.

DIRECTRICE DU BUREAU: Mlle Vinter Hansen.

MEMBRES: MM. Cunningham, Hogg, Spencer Jones, Platzeck, van den Bos, Director Harvard Observatory.

The members of Commission 6 have made no suggestions for a modification or improvement of Astronomical Telegrams and Announcement Cards. According to a proposal by Sir Harold Spencer Jones the preliminary co-ordinates of the Earth's pole derived at the Central Bureau of the International Latitude Service are now published in the Circulars. These may be used in the Time Service and for the determination of geographic positions.

A. MIKHAILOV  
*President of the Commission*

### REPORT OF THE CENTRAL BUREAU FOR ASTRONOMICAL TELEGRAMS

The work of the Bureau since 1952 has proceeded along the usual lines. As the number of subscribers to telegrams and circulars, and to circulars only, is steadily growing, the clerical work at the Bureau is now quite considerable, and it would not have been possible to keep the present price of subscription fairly low, if we were not the recipients of subsidies from the International Astronomical Union and the Danish Rask-Örsted Foundation, which subsidies pay for all our clerical work. Some astronomers, notably Dr L. E. Cunningham, Dr G. Merton with the computers of the B.A.A., Dr L. Kresák and some Japanese computers give the Bureau great help in supplying orbits and ephemerides of current interest.

The Bureau tries its best to satisfy the desires of the subscribers. A few of the telegram subscribers wish to have all news transmitted by telegram, while most of the subscribers only wish first positions of comets and first notices of novae conveyed telegraphically. Also quite a few make restrictions regarding the magnitude of the object, for which they want news sent by telegram. Further, some overseas subscribers to the circulars want the circulars sent by air-mail, for which service they pay the extra costs.

While formerly all subscribers ordered the telegrams and circulars direct from the Bureau, and all subscriptions were considered continuous until specifically cancelled, some subscribers now order the circulars through an authorized book agency in their own country and only for a year at a time. I should like to point out that as a rule such arrangement is not to the advantage of the subscribers, besides giving the Bureau some extra clerical work, for the said book agencies cannot be expected to understand the workings of the service given by the Bureau and often do not renew the subscriptions in due time. Hence gaps may occur in the mailing of circulars to the subscribers involved, and these often complain about the non-appearance of the circulars at the beginning of a new year, so much correspondence is needed between the Bureau on the one hand and the subscriber and book agency on the other. The Bureau would therefore appreciate it if the subscribers would deal direct with the Bureau as much as possible.

Below are given the number of telegrams received and transmitted to the subscribers in the period 1952–54 (20 October), together with the number of circulars issued in the same period. Further, a list is given of present subscribers to the services of the Bureau:

	Telegrams		Circulars
	Received	Sent	
1952	35	571	47 (1340–1386)
1953	27	319	48 (1387–1434)
1954 (until 20 Oct.)	34	525	44 (1435–1478)
	96	1415	139

*Report of meeting. 31 August 1955*

ACTING PRESIDENT: Miss J. M. Vinter Hansen.

SECRETARY: Dr G. Merton.

The President reported that the accounts of the Bureau had been audited and passed by Sir Harold Spencer Jones.

Dr van den Bos proposed, and Miss F. W. Wright seconded, and the meeting approved of the following resolution:

That the I.A.U. be asked to continue the subvention of 1200 gold francs a year to the Central Bureau for Astronomical Telegrams.

Dr Menzel reported that he had made inquiries among subscribers to the Harvard Announcement Cards as to the working of the Telegraphic Service and it was unanimously agreed that this was satisfactory, and no improvements were suggested.

The President referred to the resolution by Commission 15 asking for a Telegraphic Service giving information on physical details and changes in comets.

Dr Waterfield explained his views and suggestions, and some discussion took place.

It was agreed to accept the request by Commission 15 that an additional Telegraphic Service be arranged to provide physical information on comets for those who require it.
