

Primary Health Care Research & Development

VOLUME 11 | ISSUE 2 | APRIL 2010

CONTENTS

Editorial

- 105 Integrated primary care in an integrated Europe
Geoffrey Meads and Sara Shaw

Development

- 108 Celebrating connecting with Communities: coproduction in global Primary Health Care
Mary Chiarella, Jane Salvage and Elizabeth McInnes
- 123 Do general practitioners adhere to NICE guidelines for depression? Systematic Questionnaire Survey
Rachael Toner, Catherine Snape, Sheena Acton and Paul Blenkiron

Research

- 132 Seen but not heard – ethnic minorities' views of primary health care interpreting provision: a focus group study
Duncan S. Barron, Caroline Holterman, Pieter Shipster, Sherma Batson and Mohammed Alam
- 142 Using new technologies to deliver test results in primary care: structured interview study of patients' views
James Grayston, Karen Fairhurst and Brian McKinstry
- 155 Missed opportunities for osteoporosis management in older patients: a literature review
Nishma Manek
- 166 Evaluation of the 'Mealtime Magic' brief leaflet-based intervention in general practice
Nadia Jane Inglis, Andrea Docherty and Rachel Pryke
- 180 Sickness absence in daycare and reported hygiene routines
Katarina Hedin, Otto Cars, Patricia Geli Rolfhamre, Karl Ekdahl, Hans Fredlund and Christer Pettersson
- 187 Health promotion in later life: public and professional perspectives on an expert system for health risk appraisal
Steve Iliffe, Cameron Swift, Danielle Harari, Kalpa Kharicha, Claire Goodman and Jill Manthorpe

Short Report

- 197 School health: the challenges to service delivery in Botswana
Sheila Shaibu and Nthabiseng A. Phaladze

PRIMARY HEALTH CARE RESEARCH & DEVELOPMENT

As primary health care continues to grow in importance in relation to the rest of health care provision, this journal provides a source of information on the growing body of knowledge concerning research and development issues in primary health care. This is the first journal aimed specifically at both researchers and practitioners in primary health care, thereby bridging the gap between the two areas. It provides a forum for the publication of international, interdisciplinary research and development in primary health care (PHC).

Aims and Scope

- to disseminate evidence, information and practice examples of PHC research and developmental activities
- to analyse and debate the meaning of evidence and ways in which practice in PHC may be developed to reflect best practice, including clinical audit, quality issues and cost-effectiveness
- to draw on and promote the use of the full range of research methods in PHC research
- to provide a forum for communication between practitioners, researchers, educators and policy-makers concerned with achieving PHC-led services worldwide
- to involve user-groups as well as PHC professionals, thus reflecting accepted views on involvement of consumers in research and policy development
- to reflect and explore the political context of health care development
- to include work concerned with all aspects of PHC including prevention, health promotion, public health, education, clinical effectiveness, organizational and management issues, quality issues and policy development

Networking

This section covers the work of research networks and other initiatives to promote collaboration or build capacity in primary care research. Articles can raise issues, inform or challenge, comment on current events, or seek collaborative partners. Articles of up to 1000 words will be subject to editorial review and published as quickly as space allows. Longer contributions will be subject to peer review, as are other papers submitted to the journal.

Research

Research papers (normally up to 5000 words) will be considered as those which do one or more of the following:

- Report on primary data, either quantitative or qualitative
- Offer a critical analysis of research method(s)
- Provide a critical and systematic overview of previous studies
- Provide new theoretical/conceptual insights into phenomena
- Critically inform the evidence base for practice

Development

Development papers (normally up to 5000 words) will be considered as those which do any one or more of the following:

- Report on a change in practice
- Demonstrate how evidence supports change
- Report on audit data or pilot study data
- Report on evaluation process
- Analyse policy which underpins change in practice
