In the above referenced article, the authors regrettably omitted important information regarding the Phocid seal bones that were found at the Plattsburgh marina section. The bones were discovered by SUNY Plattsburgh geology students in the Fall of 2009. The specimen was excavated by Drs. David Franzi and Robert Feranec (New York State Museum) and subsequently donated to the New York State Museum. Dr. Feranec prepared the specimen for the radiocarbon dating and made the paleontolog-

ical identification. A collagen sample was sent to the National Ocean Science Accelerator Mass Spectrometry Facility (NOSAMS) at Woods Hole for the dating with STATEMAP funds provided by Dr. Andrew Kozlowski (New York State Museum). The NOSAMS accession number cited in the article (OS-78432, p.546) is incorrect and should be OS-78352.

The authors apologize for these unfortunate omissions and appreciate the opportunity to credit these important contributions.
