

AUSTRALIAN MATHEMATICAL SOCIETY LECTURE SERIES

Introduction to Linear and Convex Programming

NEIL CAMERON - *Monash University*

This introduction to optimisation emphasises the need from both a pure and an applied mathematical point of view, beginning with a chapter on linear algebra and Euclidean geometry. A discussion of convex analysis follows, with exercises at the end of chapters.

Lecture Series 1 0 521 31207 8 Pb. \$29.00 AMS Discount Price \$21.75

Manifolds and Mechanics

ARTHUR JONES, ALISTAIR GRAY and ROBERT HUTTON

An easy introduction to the theory of differentiable manifolds. The authors show how this can be used to develop the theory of Lagrangian mechanics directly from Newton's laws. Suitable for mathematics or physics students who have taken courses in advanced calculus.

Lecture Series 2 0 521 33650 3 Pb. \$29.00 AMS Discount Price \$21.75

Introduction to the Analysis of Metric Spaces

J. R. GILES - *University of Newcastle, New South Wales*

An introduction to the analysis of metric and normed linear spaces for undergraduates. The axiomatic method is shown, and its power in exploiting the structure of fundamental analysis, which underlies a variety of applications. Treatment progresses from the concrete to the abstract so metric spaces are studied in detail before general topology is begun.

Lecture Series 3 0 521 335928 7 Pb. \$27.50 AMS Discount Price \$20.60

An Introduction to Mathematical Physiology and Biology

J. MAZUMDAR - *Reader in Applied Mathematics, The University of Adelaide*

The mathematical modelling of biological and physiological phenomena. The discussion includes: diffusion, population, dynamics, autonomous differential equations and the stability of ecosystems, biogeography, pharmacokinetics, biofluid mechanics, cardiac mechanics, the spectral analysis of heart sounds using FFT techniques.

Lecture Series 4 0 521 37901 6 Pb. \$27.50 AMS Discount Price \$20.60

2-Knots and their Groups

J. A. HILLMAN - *Macquarie University, New South Wales*

The author attacks certain problems in Four-dimensional knot theory, focussing on knots in S^4 . New work in four-dimensional topology is also applied, to the problem of classifying 2-knots. This is an essential work for low-dimensional topologists and knot theorists.

Lecture Series 5 0 521 37812 5 Pb. \$35.00 AMS Discount Price \$26.25

CAMBRIDGE UNIVERSITY PRESS PO BOX 85 OAKLEIGH VIC.3166

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editor, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used will be of great help to the editors.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}\mathcal{M}\mathcal{S}\text{-T}\mathcal{E}\mathcal{X}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{A}\mathcal{M}\mathcal{S}\text{-T}\mathcal{E}\mathcal{X}$. Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on a $5\frac{1}{4}$ IBM PC compatible diskette or via e-mail to ams@maths.uq.oz.au. [Typed manuscripts are, of course, still acceptable.]

A remark on a third-order three-point boundary value problem	
Salvatore A. Marano	1
Uniqueness of limit cycles in polynomial systems with algebraic invariants	
André Zegeling and Robert E. Kooij	7
Two counter-examples in nonseparable Banach spaces	
G.A. Alexandrov and M.I. Kadec	21
Near-rings of homotopy classes of continuous functions	
Wolfgang Mutter	25
On Morita duality	
Weimin Xue	35
Maximal elements and equilibria for \mathcal{U}-majorised preferences	
Kok-Keong Tan and Xian-Zhi Yuan	47
A note on prime essential rings	
Hossein Zand	55
When are dense subgroups of LCA groups closed under intersections?	
M.A. Khan	59
Oscillation and nonoscillation of a delay differential equation	
Chunhai Kou, Weiping Yan and Jurang Yan	69
Primitive ideals of the quantised enveloping algebra of a complex Lie algebra	
Sei-Qwon Oh	81
Skew fields with a non-trivial generalised power central rational identity	
Katsuo Chiba	85
A note on fragmentable topological spaces	
Toshihiro Nagamizu	91
On the divergence of Hermite-Fejér type interpolation with equidistant nodes	
T.M. Mills and Simon J. Smith	101
A note on Fréchet and approximate subdifferentials of composite functions	
A Jourani and L. Thibault	111
On distinguishing spaces not homotopy-equivalent	
M.H. Eggar	117
On connected transversals to Abelian subgroups	
Markku Niemenmaa and Tomas Kepka	121
A chain rule for nonsmooth composite functions via minimisation	
D. Ralph	129
On generalised convex nonsmooth functions	
Dinh The Luc	139
Symmetries of the self-dual Yang-Mills equations	
Rod Halburd	151
On weakly SI-modules	
Nguyen van Sanh	159
Algebras of cancellative semigroups	
Jan Okninski	165
On Gaussian elimination and determinant formulas for matrices with chordal inverses: Corrigendum	
Mihály Bakonyi	175
ABSTRACTS OF AUSTRALASIAN Ph.D. THESES	
Optimality conditions in nonsmooth optimisation	
Bevil M. Glover	171
Legendre foliations on contact metric manifolds	
Nicola Jayne	173
