## The Methodological Heritage of Newton

Edited by  
Robert E. Butts  
and  
John W. Davis

In recent years there has been a resurgence of interest in Newton and his influence. His thought, like that of Aristotle and every other great thinker, underwent development which contemporary scholars are seeking to understand more clearly than did their predecessors, awed as they were by the overwhelming Newtonian achievement. Seven essays are collected in this volume, four of which were first prepared for an international colloquium on Newton held at the University of Western Ontario in April 1967. The others were added to supplement and round out the collection, which now makes a book that will be valuable to all those interested in the history of science, of ideas, and of philosophy. \$5.50
