

PROCEEDINGS
OF THE
EDINBURGH
MATHEMATICAL SOCIETY

SECOND SERIES

VOL. 7
1942—1946

London:
G. BELL & SONS, LTD., YORK HOUSE, PORTUGAL STREET

NOTE

The Society makes grateful acknowledgment of the help received from the Carnegie Trust, who have defrayed part of the cost of printing the following papers :

- “ A Note on Convergence Factors,” by W. H. J. Fuchs (p. 27).
- “ A Note on Small Vibrations,” by R. Schlapp (p. 31).
- “ On the Method of Extending Dirac’s Equation of the Electron to General Relativity,” by D. Martin (p. 39).
- “ On the Relations between the Numbers of Standard Tableaux,” by D. E. Rutherford (p. 51).
- “ The Projective Invariants of four Medials,” by H. W. Turnbull (p. 55).
- “ A Type of Periodicity of Certain Quartic Surfaces,” by W. L. Edge (p. 73).
- “ The Cesàro Summability of Fourier Integrals,” by J. Cossar (p. 84).
- “ The Geometrical Construction of Maschke’s Quartic Surfaces,” by W. L. Edge (p. 93).
- “ Transposed Algebras,” by I. M. H. Etherington (p. 104).

A list of works kindly presented to the Library of the Society will be printed in the next volume of these *Proceedings*.

G. BELL AND SONS, LTD.

INVERSIVE GEOMETRY. By FRANK MORLEY, M.A., Sc.D.(Camb.), and F. V. MORLEY, D.Phil.(Oxford). Demy 8vo. 16s. net.

Mathematical Gazette. "It would be superfluous to commend this book to geometers, for they will have ordered it by the first post, but all mathematicians will find here a great deal of amusing and exciting reading—where else, for instance, will the algebraist see the geometric meaning of the Lagrange resolvent? School libraries should buy it, for it would be a real revelation to a gifted sixth-former, and to many a mathematical master. The present reviewer owes already several hours of pure enjoyment to the authors and publishers."

ADVANCED TRIGONOMETRY. By C. V. DURELL, M.A., and A. ROBSON, M.A. 9th Edition, 10s.

This book is a continuation of Durell and Wright's well-known *Elementary Trigonometry* (twenty-first edition, 5s. 6d.), and completes the school course for mathematical specialists. A *Key* is issued which forms a supplementary teaching manual (17s. 6d. net).

Mathematical Gazette:—"An original and inspiring course."

. An abbreviated form of the above book, compiled in response to many requests, is now available under the title *Shorter Advanced Trigonometry*, price 5s.

ANALYTICAL GEOMETRY OF CONIC SECTIONS AND ELEMENTARY SOLID FIGURES. By A. BARRIE GRIEVE, M.A., D.Sc. 6th Edition. 10s.

Prepared primarily for Pass and Engineering students, and for the more advanced pupils of secondary schools. The examples are numerous, and for the most part easy. They include a large number of drill exercises, and the remainder are practically all geometrical.

Nature:—"The book can be confidently recommended."

ELEMENTARY ANALYSIS. By A. DAKIN, M.A., B.Sc., and R. I. PORTER, M.A. 8th Edition, 7s.

The A.M.A.:—"Teachers on the look-out for a good book covering the syllabuses of the Additional Maths. for the School Certificate and of the Subsidiary Pure Maths. for the Higher School Certificate will do well to inspect this volume. Very lucid and well arranged, and the numerous examples provide excellent practice for both average and more advanced pupils."

ADVANCED ALGEBRA. By C. V. DURELL, M.A., and A. ROBSON, M.A. Vol. I., 11th Edition, 5s. Vol. II., 5th Edition, 7s. Vol. III., 4th Edition, 7s. 6d.

Short books of *Hints* for Volumes II. and III., 2s. 6d. net each.

Volume I. (by Mr Durell) deals comprehensively with *Higher Certificate* work up to, but *excluding*, the special requirements for the "distinction papers" and scholarship work. Volumes II. and III., in which Mr Robson has collaborated with Mr Durell, together cover the ground up to university entrance scholarship standard including some of the work, *e.g.*, on Matrices, that might be done with advantage by the capable scholar.

YORK HOUSE, PORTUGAL STREET, LONDON, W.C.2.

BELL'S MATHEMATICAL SERIES

ADVANCED SECTION.

General Editor: **WILLIAM P. MILNE, M.A., D.Sc.**
Professor of Mathematics, Leeds University.

A FIRST COURSE IN NOMOGRAPHY. By S. BRODETSKY, M.A., B.Sc., Ph.D.,
Professor of Applied Mathematics at Leeds University. 3rd Edition,
revised. Demy 8vo. 10s. 6d. net.

Graphical methods of calculation are becoming of ever greater importance in theoretical and industrial science, as well as in all branches of engineering practice. Nomography is one of the most powerful of such methods. This book caters for both the practical man who wishes to learn the art of making and using nomograms, and the student who desires to understand the underlying principles.

A FIRST COURSE IN STATISTICS. By D. CARADOG JONES, M.A., F.S.S.,
Reader in Social Statistics, Liverpool University. 8th Edition. Demy
8vo. 17s. 6d. net. Also Part I., 8s. 6d. net.

Mathematical Gazette:—"An excellent 'first course' . . . the examples are well chosen . . . the work is clearly expressed."

Scottish Educational Journal:—"An admirable introduction. . . Mr Jones has done his work well. We trust his valuable book will have a large circulation. It deserves it."

AN ELEMENTARY TREATISE ON DIFFERENTIAL EQUATIONS AND THEIR APPLICATIONS. By H. T. H. PIAGGIO, M.A., D.Sc., Professor of Mathematics, University College, Nottingham. 17th Edition. Demy 8vo. 12s. 6d. net.

The earlier chapters contain a simple account of ordinary and partial differential equations, while the later chapters are of a more advanced character, and cover the Cambridge Mathematical Tripos, Part II, Schedule A, and the London B.Sc. The number of examples, both worked and unworked, is very large, and all the answers are given.

Mathematical Gazette:—"One of the best mathematical text-books in the language."

ANALYTICAL CONICS. By D. M. Y. SOMMERVILLE, D.Sc. 8th Edition. Demy 8vo. 17s. 6d. net.

Nature:—"One of the most comprehensive English treatises. The author shows a wide, detailed, and accurate knowledge of the subject."

A Professor of Mathematics writes:—"The treatment is refreshingly novel, and in all cases the presentation is concise and lucid."

ELEMENTARY VECTOR ANALYSIS. By C. E. WEATHERBURN, M.A., D.Sc.,
Professor of Mathematics, University of Western Australia. 7th Edition.
Demy 8vo. 12s. 6d. net.

A simple exposition, showing how vector analysis may be employed with advantage in geometry and mechanics.

Nature:—"An excellent introduction to the subject."

ADVANCED VECTOR ANALYSIS. By C. E. WEATHERBURN, D.Sc. 3rd Edition.
Demy 8vo. 16s. net.

Here the wider problems involving functions of several independent variables are discussed, the requisite vector analysis being developed in four chapters. The remaining six form an adequate introduction to Mathematical Physics.
