

Periglacial Processes and Environments

A. L. WASHBURN

'... One of its greatest attributes is the experience and insight brought to bear by its author. A. L. Washburn is not a text book writer. He is a scholar with a lifetime of experience in the field, the library, and the classroom. It is on this basis that the book was written and it is through this cauldron of experience that all of the information so dilligently gleaned from the literature was filtered. The result is a totally integrative, thoughtful, and valuable contribution to knowledge. It should be in the library of every serious student of geomorphology.'

Annals of the American Association of Geography

Drainage Basin Form and Process

A Geomorphological Approach

K. J. GREGORY and D. E. WALLING

'... Although the apparently segregated research communities concerned with drainage basins have in truth many overlapping interests, no book hereto has drawn together the extensive results of drainage basin studies and made them available to a broad audience. While the authors emphasize the geographers' interest in drainage basins as a fundamental unit for the study of river and hillslope processes, *Drainage Basin Form and Process* accomplishes this... The book is packed with both historical and current references to and examples from the literature. It is comprehensive, not selective.'

American Journal of Science

A Geology for Engineers

Sixth Edition

F. G. H. BLYTH and M. H. de FREITAS

The issue of a sixth edition of this book bears witness to the esteem in which it is held by generations of engineers and geologists. Under joint authorship, the book has been extensively revised to include much new information. All units, except those quoted from actual case histories conform to the SI.

Cloth £7.50 Paper £3.75

An Introduction to

The Chemistry of Rocks and Minerals

M. B. PERRIN

This book deals with the application of chemistry to geology, mineralogy and mineral technology at a level suitable for sixth form and technical college students and for undergraduates taking introductory courses in geology and geochemistry. The text provides an outline of the application of chemical concepts to geological problems, particularly those relating to the location and exploitation of mineral reserves.

Publication August

Cloth £2.50. Paper £1.25

An Introduction to

Geological Structures and Maps

Third (Metric) Edition

G. M. BENNISON

All measurements and scales have been metricated, some diagrams altered and text changes made. The book is for advanced level students and first year undergraduate students of geology.

Publication June

£1.20 approx.

Journal of the International Association for Mathematical Geology

Editor-in-Chief: D. F. Merriam

Contents of Volume 7, Number 2: T. J. Wolery and L. J. Walters Jr., Calculation of Equilibrium Distributions of Chemical Species in Aqueous Solutions by Means of Monotone Sequences. R. F. Link and G. S. Koch, Jr., Some Consequences of Applying Log-normal Theory to Pseudolognormal Distributions. J. C. Brower and J. Veinus, Ontogeny of *Hybocrinus punctatus* (Miller and Gurley), an Ordovician Crinoid. D. R. Schwimmer, Quantitative Taxonomy and Biostratigraphy of Middle Cambrian Trilobites from Montana and Wyoming. J. Odell, Error Estimation in Stratigraphic Correlation. G. S. Srivastava, Geoptronics: a Term Proposed for Optical Processing of Geological Data.

Subscription: Volume 7, 1975 (6 issues) \$60.00

Your **Standing Order** authorizes us to ship and bill each volume automatically, immediately upon publication. The **Standing Order** may be cancelled after the completion of the volume year.

NOTES FOR CONTRIBUTORS

Contributions for publication should be addressed to The Editors, Geological Magazine, Sedgwick Museum, Downing Street, Cambridge, CB2 3EQ, England.

All contributions, whether articles, correspondence or reviews, must be typed in duplicate on one side of the paper, double spaced throughout, with a wide margin on the left of each page and a narrower margin on the right. Any minor corrections should be made neatly in the typescript, leaving the margins clear.

The total length of a paper should not in general exceed 20 pages of the Geological Magazine; preference and priority are given to short papers. Longer papers (between 20 and 40 pages of Geological Magazine) will from time to time be considered, but authors wishing to submit such manuscripts should first request further details.

Articles must be accompanied by a brief summary. Contributions should follow the general style of papers in recent issues of the Magazine and the principles laid down in *Notes to Authors* (*Proc. Geol. Soc. Lond.*, No. 1627, Oct. 1965). Headings should be set out clearly, but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; sub-headings should be numbered 2.a, 2.b, etc., and tertiary headings 2.a.1., 2.a.2. No cross references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.1. The accuracy of references is the responsibility of authors. References must be double spaced and abbreviated in the form of the *World List of Scientific Periodicals* 4th Edition as far as possible, e.g. Lapworth, C. 1878. The Moffat Series. *Q. Jl geol. Soc., Lond.* **34**, 240–343. Books should be cited briefly as: Burns, R. G. 1970. *Mineralogical applications of crystal field theory*. 224 p., C.U.P., London. Unpublished work, e.g. from theses, should normally be referred to in the text in parentheses and not included in the reference list unless in the press.

Illustrations must be drawn to allow reduction to maximum size of 165 mm × 110 mm; originals must not exceed 495 mm × 330 mm and must be sent in a flat package. Lettering must allow for legibility after reduction (i.e. equivalent to 1 mm as a minimum on reduction). Duplicates of illustrations may be prints or, preferably, reductions. Metric units of the SI system are preferred. Illustrations in the text will be referred to as figures (Fig. 2, 2a, etc.), and halftone plates will be referred to (also in arabic) as Plates 2, 2a, etc. Folding plates will not be accepted. Captions for figures and plates must be typed on separate sheets.

Twenty-five offprints of each paper will be provided free of charge. Additional offprints may be purchased according to a set scale of charges.
