JULY 2020

SIR JOHN PRINGLE

Medicine

Books and Journals from
Cambridge University Press

The Cambridge Medicine programme focuses its book publishing in a defined set of core clinical areas with our great strength in the clinical brain sciences. Other specialties of significant focus include reproductive medicine/obstetrics and gynaecology, anaesthesia and critical care, emergency medicine and pathology.

Our journals programme covers a broad spectrum of medical disciplines including emergency and disaster medicine, epidemiology and infectious diseases, biomedical science, genetics, nutrition, mental health and psychiatry, and neuroscience.

We partner with many learned societies including The Society for Healthcare Epidemiology of America, the Neuroscience Education Institute, and the Royal College of Obstetricians and Gynaecologists.

For further details visit:

Cambridge
Core

CAMBRIDGE
UNIVERSITY PRESS

CONTENTS

SHEA White Paper

- 757** Legal implications of antibiotic stewardship programs
George Maliha, Mary Ellen Nepps, Pranita D Tamma, Elizabeth Dodds Ashley, Julia E Szymczak, Emma Kolesar and Keith W Hamilton

Original Articles

- 765** Containment of COVID-19 cases among healthcare workers: The role of surveillance, early detection, and outbreak management
Liang En Wee, Xiang Ying Jean Sim, Edwin Philip Conceicao, May Kyawt Aung, Jia Qing Goh, Dennis Wu Ting Yeo, Wee Hoe Gan, Ying Ying Chua, Limin Wijaya, Thuan Tong Tan, Ban Hock Tan, Moi Lin Ling and Indumathi Venkatachalam
- 772** The role of triage in the prevention and control of COVID-19
Qiaoxia Wang, Xiaoping Wang and Huanping Lin
- 777** Global burden, point sources, and outbreak management of healthcare-associated *Burkholderia cepacia* infections: An integrative review
Ramon Z. Shaban, Cristina Sotomayor-Castillo, Shizar Nahidi, Cecilia Li, Deborah Macbeth, Brett G. Mitchell and Philip L. Russo
- 784** Decision making to discharge patients from airborne infection isolation rooms: The role of a single GeneXpert MTB/RIF strategy in Brazil
Lucas José Bazzo Menon, Cinara Silva Feliciano, Mateus Rennó de Campos and Valdes Roberto Bollela
- 789** Postdischarge antibiotic use for prophylaxis following spinal fusion
David K. Warren, Katelin B. Nickel, Jennifer H. Han, Pam Tolomeo, Christopher J. Hostler, Katherine Foy, Ian R. Banks, Victoria J. Fraser and Margaret A. Olsen for the CDC Prevention Epicenter Program
- 799** Prediction tool for high risk of surgical site infection in spinal surgery
Takanori Namba, Masaki Ueno, Gen Inoue, Takayuki Imura, Wataru Saito, Toshiyuki Nakazawa, Masayuki Miyagi, Eiki Shirasawa, Osamu Takahashi and Masashi Takaso
- 805** Colorectal bundles for surgical site infection prevention: A systematic review and meta-analysis
Aurora E. Pop-Vicas, Cybele Abad, Kelsey Baubie, Fauzia Osman, Charles Heise and Nasia Safdar
- 813** The economic burden of *Clostridioides difficile* infection in patients with hematological malignancies in the United States: A case-control study
Lola Duhalde, Lise Lurienne, Sebastian M. Wingen-Heimann, Lucien Guillou, Renaud Buffet and Pierre-Alain Bandinelli

- 820** Respiratory surveillance wards as a strategy to reduce nosocomial transmission of COVID-19 through early detection: The experience of a tertiary-care hospital in Singapore
Liang En Wee, Jenny Yi Chen Hsieh, Ghee Chee Phua, Yuyang Tan, Edwin Philip Conceicao, Limin Wijaya, Thuan Tong Tan and Ban Hock Tan

Commentaries

- 826** Identification of COVID-19 can be quicker through artificial intelligence framework using a mobile phone-based survey when cities and towns are under quarantine
Arni S. R. Srinivasa Rao and Jose A. Vazquez
- 831** Intraoperative bacitracin irrigations for the prevention of surgical site infections—Consider the alternatives
Lina Meng, Stan Deresinski and Marisa Holubar

Review

- 833** Antimicrobial stewardship in the outpatient setting: A review and proposed framework
Jasmine R. Marcelin, Philip Chung and Trevor C. Van Schooneveld

Concise Communications

- 841** Forecasting the cumulative number of COVID-19 deaths in China: a Boltzmann function-based modeling study
Yuanyuan Gao, Zuqin Zhang, Wei Yao, Qi Ying, Cheng Long and Xinmiao Fu
- 844** A regional initiative to improve cleaning of high-touch surfaces in long-term care facilities
David P. Calfee, Robert P. O'Neil, Quin Sylvester, Jared M. Bosk, Zeynep Sumer King, Karyn Langguth, Emily C. Lutterloh and Debra Blog
- 848** Documentation of acute change in mental status in nursing homes highlights opportunity to augment infection surveillance criteria
Austin R. Penna, Christina L. Sancken, Nimalie D. Stone, Taniece R. Eure, Wendy Bamberg, Grant Barney, Devra Barter, Stacy Carswell, Paula Clogher, Ghinwa Dumyati, Christina B. Felsen, Linda Frank, Deborah Godine, Helen Johnston, Marion A. Kainer, Linda Li, Ruth Lynfield, J. P. Mahoehney, Joelle Nadle, Rebecca Pierce, Susan M. Ray, Sarah Shrum Davis, Marla Sievers, Lucy E. Wilson, Alexia Y. Zhang, Shelley S. Magill and Nicola D. Thompson
- 851** Use of whole-genome sequencing to detect an outbreak of *Malassezia pachydermatis* infection and colonization in a neonatal intensive care unit—California, 2015–2016
Nancy A. Chow, Raymond Chinn, Alice Pong, Kerry Schultz, Janice Kim, Lalitha Gade, Brendan R. Jackson, Karlyn D. Beer and Anastasia P. Litvintseva
- 854** Clinical usefulness of catheter-drawn blood samples and catheter-tip cultures for the diagnosis of catheter-related bloodstream infections in neonates
Janita Ferreira, Paulo Augusto Moreira Camargos, Viviane Rosado, Leni Márcia Anchieta and Roberta Maia de Castro Romanelli

Research Briefs

- 857** Level of underreporting including underdiagnosis before the first peak of COVID-19 in various countries: Preliminary retrospective results based on wavelets and deterministic modeling
Steven G. Krantz and Arni S.R. Srinivasa Rao
- 859** Utility of retesting for diagnosis of SARS-CoV-2/COVID-19 in hospitalized patients: Impact of the interval between tests
Michelle E. Doll, Rachel Pryor, Dorothy Mackey, Christopher D. Doern, Alexandra Bryson, Pamela Bailey, Kaila Cooper, Emily Godbout, Michael P. Stevens and Gonzalo Bearman

Letters to the Editor

- 862** Potential impact of contaminated bronchoscopes on novel coronavirus disease (COVID-19) patients
Cori L. Ofstead, Krystina M. Hopkins, Matthew J. Binnicker and Gregory A. Poland
- 865** Core principles for infection prevention in hemodialysis centers during the COVID-19 pandemic
Gang Chen, Yangzhong Zhou, Lei Zhang, Ying Wang, Rong-rong Hu, Xue Zhao, Dan Song, Jing-hua Xia, Yan Qin, Li-meng Chen and Xue-mei Li
- 866** Rapid nosocomial spread of SARS-CoV-2 in a French geriatric unit
Philippe Vanhems, Mitra Saadatian-Elahi, Michel Chuzeville, Elodie Marion, Louise Favrelle, Delphine Hilliquin, Geraldine Martin-Gaujard, Robin Gourmelon, Mathilde Noaillon, Nagham Khanafer and on behalf of COVID-Outcomes-HCL Consortium
- 868** When infection prevention enters the temple: Intergenerational social distancing and COVID-19
David M. Hartley, Heather Schacht Reisinger and Eli N. Perencevich
- 869** Artificial intelligence plays an important role in containing public health emergencies
Ningning Tang, Guangyi Huang, Min Li and Fan Xu
- 870** Reducing hand recontamination of healthcare workers during COVID-19
Giorgia Gon, Stephanie Dancer, Robert Dreibelbis, Wendy J. Graham and Claire Kilpatrick
- 872** Shelter hospital mode: How do we prevent COVID-19 hospital-acquired infection?
Yong Yang, Hailian Wang, Kang Chen, Jun Zhou, Shaoping Deng and Yi Wang
- 873** Lessons learned from Korea: COVID-19 pandemic
Hazhir Moradi and Atefeh Vaezi
- 874** The novel coronavirus (COVID-19) infection in Hangzhou: An experience to share
MengYuan Diao, Sheng Zhang, Dechang Chen and Wei Hu
- 875** COVID-19 positive test result from a private hospital laboratory: Neglecting to report and problems with national infection control
Won Sriwijitalai and Viroj Wiwanitkit

- 876** Harmonizing the COVID-19 cacophony: People need guidance
Taha Bin Arif and Aiman Ali
- 877** COVID-19 among medical personnel in the operating room
Pathum Sookaromdee and Viroj Wiwanitkit
- 878** Management-supportive measures for managers of healthcare organizations during the COVID-19 epidemic
Reza Dehnavieh and Khalil Kalavani

INFECTION in the time of RESISTANCE

One Patient at a Time

Online CME/CPE HABP/VABP Activity

This activity was originally planned for SHEA Decennial 2020. Although we were unable to present live, we are pleased to provide you online access to this high-quality and timely content.

Educational Overview

The past decade has seen a growing diversity of bacterial resistance mechanisms and the global rise and spread of multidrug-resistant (MDR) pathogens. These infections pose a significant health threat and burden to individuals and healthcare institutions. In the US, the CDC estimates that at least 2.8 million people acquire antimicrobial-resistant infections annually that result in at least 35,000 deaths. The diversity and spread of MDR and XDR (extensively drug-resistant) organisms challenge clinicians and substantially impact patient outcomes and healthcare costs. As a result, healthcare providers must be fully knowledgeable and remain up-to-date of the local epidemiology and resistance trends as well as recognize the latest tools available that aim to minimize the burden of these infections. These tools include rapid diagnostics and newer antimicrobials that can overcome resistance mechanisms and allow for pathogen-specific therapy. In this manner, clinicians have a greater ability to tailor management approaches based on patient factors and needs.

Learning Objectives

At the conclusion of the educational activity, the learner should be able to:

- Summarize the changing epidemiology of antimicrobial resistance in relation to prevalence and resistance mechanisms
- Differentiate the pharmacology and antibacterial activity of newer antimicrobial agents to combat antimicrobial-resistant infections
- Identify strategies aimed to guide appropriate antimicrobial selection to optimize outcomes and reduce resistance development

Target Audience

This continuing medical education activity meets the needs of ID healthcare providers, including physicians, pharmacists, and microbiologists, in a variety of practice settings, including large and small health systems, outpatient clinics, managed-care organizations, long-term care facilities, and academia.

Faculty

Robert A. Bonomo | MD, FIDSA
Professor of Medicine
Case Western Reserve University
School of Medicine
Chief, Medical Service
Louis Stokes Cleveland Department
of Veteran Affairs Medical Center
Northeast Ohio VA Health Care System
Cleveland, OH

Keith A. Rodvold | PharmD, FCCP, FIDSA
Professor, Department of
Pharmacy Practice
Co-Director, Section of Infectious
Diseases Pharmacotherapy
Professor of Pharmacy in Medicine
Colleges of Pharmacy and Medicine
University of Illinois at Chicago
Chicago, IL

Accreditation - Physicians

This activity has been planned and implemented in accordance with the accreditation requirements and policies of the Accreditation Council for Continuing Medical Education through the joint providership of Center for Independent Healthcare Education (Center) and Vemco MedEd. Center is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians. Center designates this Enduring material for a maximum of 1.5 *AMA PRA Category 1 Credit(s)*[™]. Physicians should claim only the credit commensurate with the extent of their participation in the activity.

This activity is also accredited for Physician Assistants, Nurse Practitioners, and Pharmacists. For questions regarding accreditation, please contact info@jointponsor.com

Disclosures of Conflict of Interest

Center for Independent Healthcare Education and Vemco MedEd require faculty, planners, and others who are in a position to control the content of continuing education activities to disclose to the audience any real or apparent conflict of interest related to the activity. All identified conflicts of interest are reviewed and resolved to ensure fair balance, objectivity, and scientific rigor in all activities. The faculty is further required to disclose discussion of off-label uses in their presentations.

Supported by an educational grant from Merck & Co., Inc.

Jointly provided by Center
for Independent Healthcare
Education and Vemco MedEd

An Official Publication of the Society for Healthcare Epidemiology of America

Infection Control & Hospital Epidemiology (ISSN 0899-823X) is published monthly by Cambridge University Press, One Liberty Plaza, New York, NY 10006, USA.

Editorial Office

Communications should be addressed to the Editor, *Infection Control & Hospital Epidemiology*, One Liberty Plaza, New York, NY 10006 (email: iche.managingeditor@cambridge.org). Contributors should consult the Instructions for Contributors, which is available at the journal's Web site.

Advertising

Please direct advertising inquiries to M. J. Mrvica Associates, 2 West Taunton Avenue, Berlin, NJ 08009 (e-mail: mjmrvice@mrvice.com; telephone: 856-768-9360, fax: 856-753-0064). Publication of an advertisement in *Infection Control & Hospital Epidemiology* does not imply endorsement of its claims by the Society for Healthcare Epidemiology of America, by the Editor, or by Cambridge University Press.

Permissions

Articles may be copied or otherwise reused without permission only to the extent permitted by Sections 107 and 108 of the US Copyright Law. Permission to copy articles for personal, internal, classroom, or library use may

be obtained from the Copyright Clearance Center (<http://www.copyright.com>, email: info@copyright.com). For all other uses, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale, please contact Cambridge University Press. Full details may be found at: www.cambridge.org/about-us/rights-permissions.

Subscriptions

The individual subscription rate for 2020 is \$287. Individuals have the option to order directly from Cambridge University Press. Institutional print + electronic and e-only subscriptions are available from Cambridge University Press and include unlimited online access; rates are tiered according to an institution's type and research output and may be reviewed at the journal's homepage on Cambridge Core: cambridge.org/ICHE.

Please direct subscription inquiries and requests for back issues to Customer Services at Cambridge University Press, e-mail: subscriptions_newyork@cambridge.org (USA, Canada, and Mexico) or journals@cambridge.org (outside of USA, Canada, and Mexico).

Postmaster: Send address changes to *Infection Control & Hospital Epidemiology*, Cambridge University Press, One Liberty Plaza, New York, NY 10006 USA.

About the cover:

Since 2015, the cover format of each volume of *Infection Control and Hospital Epidemiology* has been changed to honor one of the many professionals throughout history who recognized not only how disease might be spread but also how those principles could be applied to reduce healthcare-associated infections.

Sir John Pringle (1707–1782) was born into a prominent Scottish family. He initially studied the classics and philosophy followed by 1 year of medical study at the University of Edinburgh. He planned to leave medicine for a mercantile career. While in the Netherlands, Pringle met Boerhaave, and his interest in medicine was re-energized. He received his medical degree in 1730 from the University of Leyden. In 1734, he assumed a chair in the Faculty of Arts in “Pneumatical and Ethical Philosophy” and practiced medicine at the University of Edinburgh.

At the age of 35, Pringle was appointed surgeon to the British Forces, which had formed an alliance with the Habsburg Dynasty against France. In 1745, as Physician General of the Army, Pringle played a role in assuring the humane treatment of prisoners of war and neutrality for military hospitals hundreds of years before the Geneva Convention and the formation of the Red Cross.

In 1748, Pringle returned to London and published his experiences in military hospitals. He recognized that hospital fever and jail fever were spread from person to person and that both syndromes were due to typhus. He mandated that prisoners be washed, that their clothing burnt, and that clean clothes be provided at public expense. He understood that hospitals were a major cause of patient sickness: crowding, filth, and lack of hygiene facilitated the spread of disease. Decades before Florence Nightingale, Pringle advocated for fresh air, cleanliness, and hygiene. He observed that fomites contaminated with body fluids, like bedding, spread sepsis. He adopted microscopy and understood that the mites he saw caused scabies. Many years before Lister and Semmelweis, Pringle used acids and distilled spirits to reduce the spread of sepsis, and the first use of the term “antiseptis” was attributed to him.

During his lifetime, Pringle was recognized for his work as President of the Royal College of Physicians (RCP), Member of the Academy of Sciences, and receipt of the prestigious Copley Gold Medal. He was made a Baronet in 1766 and physician to the King in 1774. By 1780, he retired from medicine and returned to Scotland, but the cold climate did not agree with him. Pringle returned to London, but not before he gifted 10 volumes of his *Medical and Physical Observations* to the RCP (Edinburgh) with the understanding that they would never be published or lent out. He died 4 months later.

The major advances in infection control that Pringle made to the field have too often been attributed to others, and few reminders of him survive to this day. His birthplace was demolished and his grave destroyed during World War II; 2 paintings remain. A memorial to Sir John Pringle can be found in Westminster Abbey albeit in Poets’ Corner; this location is ironic, as one friend noted that an inadequate appreciation of English poetry was one of Pringle’s few failings.
