Main entry under title:

CIP

Unstable current systems and plasma instabilities in astrophysics.

“Symposium no. 107 held in College Park, Maryland, U.S.A., August 8–11, 1983.”

At head of title: International Astronomical Union.

Includes index.

1. Astrophysics—Congresses. 2. Space plasmas—Congresses.
3. Plasma instabilities—Congresses. 4. Syrovatskiĭ, S. I. (Sergei Ivanovich), 1925–1979. I. Kundu, Mukul Ranjan, 1930–
- II. Holman, Gordon D. III. International Astronomical Union.
- IV. Title: Unstable current systems and plasma instabilities in astrophysics.

TABLE OF CONTENTS

FOREWORD xi

LIST OF PARTICIPANTS xix

M. R. KUNDU: Introductory Remarks 1

SESSION I

B. U. Ö. SONNERUP: Magnetic Field Reconnection in Cosmic Plasmas
(Invited Review). 5

C. T. RUSSELL: Patchy Reconnection and Magnetic Ropes in Astrophysical
Plasmas (Invited Review) 25

R. C. ELPHIC: Magnetic Flux Ropes of Venus: A Paradigm for Helical
Magnetic Structures in Astrophysical Systems (Poster Paper) 43

R. L. STENZEL and W. GEKELMAN: Laboratory Experiments On Current
Sheet Disruptions, Double Layers, Turbulence and Reconnection
(Invited Review) 47

J. F. DRAKE: Reconnection in Sheared Magnetic Fields in Space and
Astrophysics (Invited Review) 61

SESSION II

C. A. NORMAN: Formation, Equilibrium and Stability of Jets (Invited
Review) 85

J. HEYVAERTS: Energy Dissipation Mechanisms in the Solar Corona
(Invited Review) 95

R. A. SMITH: On the Role of Double Layers in Astrophysical Plasmas
(Invited Contribution) 113

W. LOTKO: Particle Energization in Stochastic Double Layers 125

G. BENFORD: Links Between Jet Instabilities, Radiation and Propagation
in Astrophysics (Invited Contribution) 131

J. A. IONSON: A Unified Theory of Coronal Heating 139

SESSION III

A. BRATENAHL and P. J. BAUM: Laboratory Experiments on Reconnection
in Current Sheets (Invited Review) 147

J. BIRN: Computer Simulation of Reconnection in Planetary Magnetospheres (Invited Review).....	167
M. R. KUNDU: Observational Evidence for Magnetic Reconnection in Microwave Solar Bursts.....	185
G. D. HOLMAN: Acceleration of Runaway Electrons and Joule Heating in Solar Flares	191
T. TAJIMA, F. BRUNEL, J.-I. SAKAI, L. VLAHOS, and M. R. KUNDU: The Coalescence Instability and Solar Flares (Invited Contribution)	197
T. SATO: 3D Simulation of Externally Driven Reconnection	211
J. J. ALY: Opening of the Magnetic Field Lines in a Fast Rotating Magnetosphere, with an Application to Jupiter	217
J. J. ALY: Quasi-Static Evolution of Force-free Magnetic Fields and a Model for Two-Ribbon Solar Flares (Poster Paper)	221
B. LOKANADHAM, P. K. SUBRAMANIAN, M. S. REDDY, B. M. REDDY, and D. R. LAKSHMI: Solar Microwave Emission in Active Regions (Poster Paper)	225

SESSION IV

E. R. PRIEST: Current Sheets in Solar Flares (Invited Contribution)	233
D. J. MULLAN: Energy Dissipation Mechanisms in Flare Stars (Invited Review)	245
G. VAN HOVEN: A Unified Treatment of the Filament and Flare Instabilities (Invited Contribution)	263
R. S. STEINOLFSON and G. VAN HOVEN: Nonlinear Evolution of the Resistive Tearing Mode (Poster Paper)	273
P. BATISTONI, G. EINAUDI, F. RUBINI, C. CHIUDEFI, and G. TORRICELLI: Resistive Instabilities in Astrophysical Conditions: A Critical Discussion (Poster Paper)	277
Y. UCHIDA and T. SAKURAI: Magnetodynamical Processes in Interacting Magnetospheres in RS CVn Binaries	281
Y. UCHIDA and K. SHIBATA: 'Sweeping Pinch' Mechanism and the Acceleration of Jets in Astrophysics (Poster Paper)	287
P. A. STURROCK, P. KAUFMANN and D. F. SMITH: Energy Release in Solar Flares	293

V. KRISHAN and M. R. KUNDU: An Interpretation of Millisecond Time Variation in Hard X-ray Solar Flares	299
A. T. Y. LUI: Observations of the Earth's Cross-Tail Current Sheet and Their Implications	303
M. ANDRÉ: Plasma Instabilities Generated by Streaming Particles ...	309

SESSION V

J. D. HUBA: Anomalous Transport in Current Sheets (Invited Review)	315
C. T. DUM: Anomalous Transport Induced by Field Aligned Currents and its Relation to Electromagnetic Coupling (Invited Review)...	329
D. G. WENTZEL: Self-Confined Cosmic Rays (Invited Review)	341
S. R. SPANGLER and J. P. SHEERIN: Nonlinear Effects and the Limitation of Electron Streaming Instabilities in Astrophysics	355
A. H. NELSON: Cosmic Rays and the Parker Instability (Poster Paper)	361
L. NOCERA, B. LEROY and E. R. PRIEST: Phase Mixing of Propagating Alfvén Waves	365
S. MIGLIUOLO: Velocity Shear Instabilities in the Anisotropic Solar Wind (Poster Paper)	371
T. P. RAY and A. I. ERSHKOVICH: Kelvin-Helmholtz Instabilities in a Magnetised Compressible Plasma (Sheared Flow)	375

SESSION VI

A. HASEGAWA: Plasma Heating by Alfvén Waves - Kinetic Properties of Magnetohydrodynamic Disturbances (Invited Review)	381
S. M. MAHAJAN: Kinetic Theory of Alfvén Wave Heating (Poster Paper).....	391
A. FERRARI: MHD Equilibrium and Instabilities in Extragalactic Jets (Invited Review)	393
R. N. HENRIKSEN: Bursting Particle Acceleration in Radio Jets (Invited Contribution)	413
D. EICHLER: Instabilities in Astrophysical Jets: Disease and Cure (Invited Contribution)	425
J. A. EILEK: Current Systems in Radio Jets	433
P. E. HARDEE: Is the Jet in M87 Magnetically Confined?	439

SESSION VII

C. S. LIU: Laboratory Plasma Processes of Astrophysical Interest (Invited Review)	447
F. V. CORONITI: Accretion Disk Electrodynamics (Invited Review) ..	453
G. LAKE and R. E. PUDRITZ: Ultra-High Energy Cosmic Ray Production by Current Disruption in Active Galactic Nuclei (Poster Paper)	471
M. J. KESKINEN: Theory of Strongly Turbulent Two-Dimensional Cross Field Convection of Current Carrying Space Plasmas (Abstract)	475
D. GILDEN and T. TAJIMA: Magnetic Field Reconnection in Differentially Rotating Accretion Disks	477
A. RAY: Coronal Arcades in the Sun and Their Hydromagnetic Stability	483
S. T. WU, J. F. WANG, and E. TANDBERG-HANSEN: MHD Analysis of the Evolution of Solar Magnetic Fields and Currents in an Active Region (Poster Paper)	487
G. BERTIN and B. COPPI: Bending Waves on Current Sheets	491
K. TSINGANOS, A. FERRARI, and R. ROSNER: Quasi-Two-Dimensional Cosmic Jets	497

SESSION VIII

M. TANAKA and K. PAPADOPOULOS: Creation of High Energy Electron Tails by Lower-Hybrid Waves and its Relevance to Type II and III Bursts	505
D. F. SMITH: Current Status of the Dissipative Thermal Model for Solar Hard X-ray Bursts (Poster Paper)	509
J. SAKAI and R. SUGIHARA: Non-Stochastic Acceleration of Protons in the Magnetic Neutral Sheet	513
D. S. SPICER and R. N. SUDAN: Beam Return Current Systems in Solar Flares	519
L. VLAHOS and H. L. ROWLAND: Collisionless Effects on Beam-Return Current Systems in Solar Flares	521

SESSION IX

V. M. VASYLIUNAS: Summary of Conference (Invited Summary)	529
---	-----

C. F. KENNEL, J. ARONS, R. BLANDFORD, F. CORONITI, M. ISRAEL, L. LANZEROTTI, A. LIGHTMAN, K. PAPADOPOULOS, R. ROSNER, and F. SCARF: Perspectives on Space and Astrophysical Plasma Physics	537
<u>CONTRIBUTIONS FROM THE U.S.S.R.</u>	
G. Ya. SMOLKOV: Spatio-Temporal Features of the Development of Microwave Emission of Active Regions and Flares	555
V. A. MAZUR and A. V. STEPANOV: Concerning the Dynamics of Energetic Protons in Coronal Magnetic Loops: Dispersion Effects of Alfvén Waves	559
SUBJECT INDEX	561

SERGEI I. SYROVATSKII
1925 - 1979

DR. S. I. SYROVATSKII

Sergei Ivanovitch Syrovatskii was born on March 2, 1925 in the city of Bereznegovatoye. In 1941 when the second World War broke out, sixteen years old Syrovatskii went to war. He was awarded two orders and many medals for his valiant conduct during the war.

After graduation from the Physics faculty of the Moscow State University in 1951, Syrovatskii started post graduate studies in the P.N. Lebedev Physical Institute, and studied under the direction of Prof. S. Z. Belenky. Since that time he has worked in the Theoretical Department of the Institute. The first works of Syrovatskii were devoted to magnetohydrodynamics, in particular to different types of surface discontinuities and shock waves. "The Theory of Discontinuities in Magnetohydrodynamics" was the subject of his dissertation in 1954. In 1957 his results on this work were published and were among the first fundamental researches on magnetohydrodynamics carried out in the USSR.

In 1959 Syrovatskii published in the Soviet Astronomical Journal an analysis of relativistic electron distribution in the Galaxy and of the determination of the Galactic background radio emission. This paper led to the beginning of a long collaboration between Syrovatskii and Ginzburg in radioastronomy.

It was a great achievement in cosmic ray physics when a phenomenological diffusion model of cosmic ray propagation was developed by Ginzburg and Syrovatskii. In the 1960's Syrovatskii along with Ginzburg and Sazonov solved many problems associated with magnetobremstrahlung radiation, and elaborated many of its characteristic features. Using the first measurements of relativistic galactic cosmic ray electron flux and of the Galactic background radio intensity, Ginzburg and Syrovatskii investigated in 1961 the question of origin of relativistic electrons in the Galaxy. They showed that direct acceleration of electrons in the Galactic sources was important for radio emission rather than their origin as secondary products due to nuclear interactions in cosmic rays. In 1963, Ginzburg and Syrovatskii published the famous monograph "The Origin of Cosmic Rays".

In mid 1960's, Syrovatskii started studies of plasma behavior in strong magnetic fields. He showed that in the neighborhood of the zero point of magnetic fields in a plasma, there can develop a current sheet with a width much larger than the thickness. These studies were used for modelling plasma behaviour in the solar corona, where the magnetic field energy density is much higher than the plasma energy density. The processes of formation, stability and disruption of current sheets has been studied for many years theoretically, numerically and under laboratory conditions by Syrovatskii and his group. A very important

property of current sheets is their stability. In the typical solar corona their lifetime is several hours. This property enables a very large energy to be accumulated in the solar atmosphere in the form of magnetic energy of a current sheet. Current sheet disruption causes release of the accumulated energy in different forms, which is a solar flare in the Syrovatskii's model.

Over the years, the problems studied by Syrovatskii's group involved many new branches of solar physics. These problems include hydrodynamics of the convective zone of the Sun, solar dynamo, particle acceleration in solar flares and secondary processes on the Sun. Syrovatskii had more than 200 scientific publications to his credit.

Syrovatskii became a Professor at the Lebedev Physical Institute in 1979. On September 26, 1979 he died of a heart attack.

In 1982, Sergei Syrovatskii (posthumously) and his collaborators were awarded the State Prize of the USSR for a series of papers on "Dynamics of Current Sheets and Solar Activity".
