Editor-in-Chief

Michel Doreau, INRA, France

animal publishes original cutting-edge research, 'hot' topics and horizon-scanning reviews on animal-related aspects of the life sciences at the molecular, cellular, organ, whole animal and production system levels. The main subject areas include: breeding and genetics; nutrition; physiology and functional biology of systems; behaviour, health and welfare; farming systems, environmental impact and climate change; product quality, human health and well-being.

Editor-in-Chief

William Symondson, Cardiff University, UK

Established in 1910, *Bulletin of Entomological Research* is an internationally recognised journal focusing on applied entomology from the traditional to the cutting-edge. The *Bulletin* publishes high-quality and original research papers, review articles and short communications concerning insects, mites, ticks or other arthropods of economic importance in agriculture, forestry, stored products, biological control, medicine, animal health and natural resource management.

Editor-in-chief

K. Younger, Dublin Institute of Technology, Ireland

Nutrition Research Reviews presents up-to-date, concise, critical reviews of key topics in nutritional science in order to advance new concepts and hypotheses. The journal encourages the exchange of fundamental ideas on nutritional well-being in both humans and animals.

Editor-in-chief

C Borgemeister, *icipe*, Nairobi, Kenya

International Journal of Tropical Insect Science is the only journal devoted exclusively to the latest research in tropical and sub-tropical insect science. Each issue brings you original, peer-reviewed research findings on tropical insects and related arthropods, with special emphasis on their environmentally benign and sustainable management. The journal's scope includes biological diversity, ethnoentomology, biosystematics and environmental issues.

Editor

John Lewis, Royal Holloway, University of London, UK

Journal of Helminthology publishes original papers and review articles on all aspects of pure and applied helminthology, particularly those helminth parasites of environmental health, medical or veterinary importance. Research papers on helminths in wildlife hosts, including plant and insect parasites, are also published along with taxonomic papers contributing to the systematics of a group. The journal will be of interest to academics and researchers involved in the fields of human and veterinary parasitology, public health, microbiology, ecology and biochemistry.

Notes for Authors

Animal Health Research Reviews provides an international vehicle for the publication of reviews and commentaries on all aspects of animal health. The Journal covers both infectious and non-infectious diseases in domestic and wild animals. Articles may be in-depth reviews of a specific aspect of a disease or pathogen, or may cover all aspects of a disease, but must include new findings or advance new concepts and hypotheses. The Journal publishes both solicited and unsolicited articles. Reviews will normally be 5000–6000 words in length. The Journal is also produced electronically and is available on the Internet. As a contributor you should note and follow the guidelines set out below.

Refereeing. All contributions are read by two or more referees to ensure both accuracy and relevance, and revision may thus be required before final acceptance. Authors are asked to submit the names and contact details (including E-mail address if available) of up to four potential referees for their paper. On acceptance, contributions are subject to editorial amendment to suit house style.

Copyright. Papers are accepted on the understanding that the work has been submitted exclusively to the journal and has not been previously published elsewhere unless otherwise stated. Authors will be supplied with a copyright form that must be completed and returned to the Publisher. It is the author's responsibility to ensure that permission has been obtained from the copyright owner to reuse any figures or illustrations from previously published work.

Preparation of manuscripts. You should write in clear and concise English. Spelling should follow Webster's American Dictionary. Authors whose native tongue is not English are assured that in-house editorial attention to their contribution will improve clarity to readers.

Manuscripts should be printed on one side of the paper only with double line spacing and ample margins (at least 2.5 cm) on each side. Do not underline anything. Number every sheet. Italic should be used for Latin names of organisms and bold for headings. Draft-quality print from a word-processor is not acceptable. Standard abbreviations (e.g. Fig. and Figs) and SI units must be used. Upon acceptance, authors are requested to submit a computer disk containing the final version of their paper along with a hard copy of the final manuscript. Please label the disc clearly with author's name, title of journal and short title of the article and specify which word processing software (including which version) was used (e.g. WordPerfect 6.0) and specify Mac, PC, Unix or other platform.

Arrangement of papers

1. Title page including the article title, author(s), affiliation(s), keywords and one author identified for correspondence (please include the full postal address, telephone and fax numbers, and an E-mail address where available).
2. An indicative abstract that should not exceed 200 words. A short title of up to 45 characters should be provided as a running head.
3. The text divided under appropriate headings.
4. Acknowledgements (if any).
5. References
6. Tables (each on a separate sheet).
7. Captions to illustrations (group on a separate sheet or sheets).
8. Illustrations, each on a separate sheet containing no text.

Tables. Tables should be reduced to the simplest form, and should not be used where text or illustrations give the same

information. They should be submitted on separate sheets at the end of the article. Each table must be accompanied by a clear and concise caption.

Illustrations. Copies only of artwork should be submitted. The original illustrations should accompany the paper after acceptance and revision. Text figures, line drawings, computer-generated figures and graphs should be of sufficient size and quality to allow reduction. Avoid the use of grey tints or complex hatching. Halftone photographs are acceptable where they make a real contribution to the text. Figure captions should be typed on a separate sheet and numbered corresponding to the relevant figures.

References. References should follow the Harvard system. Give the surnames and initials of all authors. Give journal titles in full.

Journal article. Shibata I, Mori M and Uruno K (1997) Experimental infection of maternally immune pigs with porcine reproductive and respiratory syndrome (PRRS) virus. *Journal of Veterinary and Medical Science* **60**: 1–13.

Book chapter. Sanderson CJ (1999) Cytokines active on eosinophils. In: Makino S and Fukuda T (eds) *Eosinophils: Biological and Clinical Aspects*. Boca Raton: CRC Press, pp. 274–283.

Book. Dalton JP (1999) *Fasciolosis*. Wallingford: CABI Publishing.

Please ensure that references are complete and correct, i.e. that they include, where relevant, author name(s), article or book title, volume number, edition number, publisher, and page range.

Proofs. Correspondence and proofs for correction will be sent to the first named author unless otherwise indicated. The author will receive page proofs for checking, but it is hoped to correct only typesetting errors. It is important that proofs be returned promptly. Authors may be charged for any alterations in excess of 10% of original setting.

Offprints. The main author will receive a PDF offprint of the paper and one copy of the published issue free of charge. Extra copies of offprints should be ordered prior to publication.

Submissions of manuscripts and correspondence

Three complete copies of the manuscript and artwork should be submitted to:

Animal Health Research Reviews

Volume 10 December 2 2009

Proceedings of the 2009 Bovine Respiratory Disease (BRD) Symposium, 5–6 August 2009, Colorado Springs, Colorado, USA

Introduction

Amelia Woolums, Christopher Chase, Robert Fulton, Ricardo Rosenbusch and Robert Tremblay 99

Overview of the North American beef cattle industry and the incidence of bovine respiratory disease (BRD)

Delbert G. Miles 101

North American cattle marketing and bovine respiratory disease (BRD)

Robert A. Smith 105

Impact of bovine respiratory disease (BRD) from the perspective of the Canadian beef producer

Kee Jim 109

A dairy producer's view of respiratory disease

Robert L. Patrick 111

Challenges and opportunities for managing respiratory disease in dairy calves

Amy Stanton 113

Genetics, environment and bovine respiratory disease

Gary Snowden 117

Disease control on organic and natural cattle operations

Hubert J. Karreman 121

Veterinary ethics and production diseases

Bernard E. Rollin 125

Bovine respiratory disease research (1983–2009)

Robert W. Fulton 131

Host response to bovine respiratory pathogens

Charles J. Czuprynski 141

Update on bacterial pathogenesis in BRD

Anthony W. Confer 145

Update on viral pathogenesis in BRD

John A. Ellis 149

Vaccination for respiratory immunity: latest developments

Richard Harland 155

Antimicrobials and BRD

Mike Apley 159

Future of BRD research: an animal health industry perspective

Ann Wilkinson 163

BRD research needs in the next 10–20 years

D. Scott McVey 165

Summary of breakout sessions

Ricardo Rosenbusch, Amelia Woolums, Daniel Grooms and Robert Larson 169
