463 pages, 9 × 6, 234 illustrations, 25/- net

(The American Forestry Series)

This text makes available for the first time a comprehensive presentation of the important part that insects play in the forest, with descriptions of the various orders of insects that are injurious to forests and forest products, and discussions of the principal methods of control recommended for each order. Special attention is given to bark-beetles. A feature of the book is the wealth of excellent photographs and drawings, most of which are now published for the first time.
