

MAYER & MELTZER,

Surgical Instrument Makers.

Dan McKenzie's NASAL FORCEPS.

These are a modification of Luc's Nasal Forceps with the handles bent at an angle which permits the operator to keep the blades always in view. They have been found very useful in ordinary nasal work and in submucous resection. The bars on the handles provide additional holds for the fingers and add to the handiness of the instrument.

"Emandem"

Improved Metallic Filament Lamp.

(Registered Design.)

Gives a light of intense brilliancy (40-50 c.p.), almost equal to the Nernst Lamp, which is now unobtainable. Can be recommended to those who require a good light for special work or for general surgery.

This lamp has been installed in a large number of War Hospitals.

MAYER & MELTZER,

Surgical Instrument Makers.

ESTABLISHED OVER FIFTY YEARS.

Regulating Apparatus for the Administration of Warm Anæsthetic Vapours.

(Vide article in LANCET, Jan. 8th, 1916, by FRANCIS E. SHIPWAY, M.A., M.D.Cantab.)

The Administration of Warm Ether Vapour has all the advantages of the Open Ether Method, and is safer. There is less loss of body heat, less shock, less consumption of the anæsthetic.

Price **£3 15 0**

If with Chloroform Attachment
and Buxton Bottle,

£4 17 6
