on track

on time

Wherever helicopters fly on regular services whether from city centres or airfields in difficult terrain, the need for an all-altitude navigation system of high accuracy is vital. Only Decca provides such precise information continuously with pictorial presentation in the cockpit.

Being a low frequency hyperbolic navigation system Decca gives high-accuracy coverage down to ground level unaffected by weather or intervening obstacles. The system is so precise that it can be also used as an approach aid over more than a million square miles of Europe.

Because of Decca's high accuracy at all altitudes it is the only system that provides both close lateral separation in flight and flexibility in routing.

THE DECCA NAVIGATOR

the world's most accurate navigation system

Up in the air...

all over the world

the majority of modern aircraft
depend on Rotax Units

Rotax have been specialists in
the design and manufacture of
electrical and starting systems for
aircraft for more than 40 years
Today, all Rotax facilities for
research, development, manufacture
and a comprehensive advisory
service are at the service of the
aircraft industries of the world

Power for the Widgeon

The Alvis Leonides which powers the Westland Widgeon has already proved itself in many thousand hours of helicopter operation and is in extensive use with the Royal Navy, the Army, the Royal Air Force and many civilian operators.

The World's fastest Rotorcraft

ROTODYNE sets new world record at 191 m.p.h.

Fairey's Rotodyne vertical take-off airliner has established itself as the fastest rotorcraft in the world. On 5th January, 1959 it flew round a 62 mile closed circuit record course at an officially observed average speed of 191 m.p.h. for a new world convertiplane speed record—at *cruising* power and *operational* weight.

This record almost 50 m.p.h. faster than the corresponding helicopter record and 30 m.p.h. faster than the absolute speed record for helicopters confirms Fairey's claim that the true V.T.O. airliner is here now, for city-centre to city-centre journeys needing no expensive air fields, wasting no valuable time.

OBJECTS OF THE ASSOCIATION

The objects of the Association are to collect compile and disseminate information of a technical and semi technical nature pertaining to Helicopters and all other types of Rotating Wing Aircraft. The Association aims to work in close co operation with existing Aeronautical Bodies on matters affecting its objects and it may act as an Advisory Body in the promotion of legislation calculated to be of benefit to the development of Rotating Wing Aircraft
