

GLASGOW MATHEMATICAL JOURNAL

Edited by

R. A. RANKIN, R. P. GILLESPIE,
T. S. GRAHAM, A. GEDDES

This is a continuation of the *Proceedings of the Glasgow Mathematical Association*, which was founded in 1952,

Although the Journal is intended primarily for the publication of original work in Pure Mathematics, papers on Applied Mathematics are also included.

Published twice yearly in JANUARY and JULY

The 1968 volume is number 9

Annual subscription 50s U.S.A. \$7.00

Single part 25s. U.S.A. \$3.50 plus postage 1s.

Seven volumes of the *Proceedings* were issued between 1952 and 1966. Complete sets of back volumes are still available.

Inquiries and subscription orders should be sent to the publishers

STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields: such as frequency distributions, estimation and testing problems, sampling and experimental designs, variance analysis, spectral theory and other methods in time-series analysis, queueing theory, reliability and acceptance inspection. Journals appearing in all parts of the world, on mathematics and statistics, or on other fields and possibly containing contributions of interest are regularly scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars: technical reports of experiment and research stations are covered.

The abstracts do not exceed 400 words, with occasional "double abstracts" for papers where this size is not sufficient to represent the paper. The language is English; the language of the original paper is indicated. The headings give the name and address of the author together with the Journal in which the paper is published, moreover a note is added on the number of references, tables and figures.

The classification scheme which is used in this Journal supplies a division of all abstracts in twelve main sections. The pages of the Journal are colour-tinted in accordance with these main sections. Each section is further sub-divided to indicate the main topic of the paper; a secondary number denotes the most important additional topic referred to by the author. A special index in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. Papers containing new statistical tables are listed in a separate index.

The abstracts are numbered serially, the volume number being inserted as a prefix. The Journal is published four times a year and contains approximately 1,000 abstracts. An author index, the secondary classification index and the new statistical tables index are published in each issue and combined in a yearly supplement which also contains a list of all Journals represented in the volume by one or more abstracts.

Annual Subscription

£7, 10s. (U.S.A. \$24.00)

Single Number

£2, 5s. (U.S.A. \$7.00)

Loose Leaf Binders for Single

16s. 3d. including postage

Abstract Sheets

and packing.

Quantum-Statistical Foundations of Chemical Kinetics

Sidney Golden

This monograph examines the mathematical properties that are required of the statistical operator of von Neumann and its transformations in order to reproduce faithfully the measurable dynamical behaviour of Gibbsian ensembles in non-relativistic quantum-mechanical terms. Paper covers 55/- net. *Oxford Mathematical Monographs*

Collected Papers of G. H. Hardy

INCLUDING JOINT PAPERS WITH J. E. LITTLEWOOD AND OTHERS

VOLUME III

EDITED BY A COMMITTEE APPOINTED BY THE LONDON MATHEMATICAL SOCIETY

£5/5/- net

Classical Harmonic Analysis and Locally Compact Groups

Hans Reiter

This book deals with various current developments in analysis centring around the fundamental work of Wiener, Carleman, and especially A. Weil. It aims to clarify the relations between classical analysis and group theory, and to study basic properties of functions on abelian and non-abelian groups. Paper covers 75/- net. *Oxford Mathematical Monographs*

Meromorphic Functions

W. K. Hayman

This book, a corrected reprint, is concerned with the study of functions meromorphic in the plane and in the unit circle. It is intended for students who have had a first course in the theory of functions of a complex variable, and introduces the reader to modern research. First published in 1964. 75/- net. *Oxford Mathematical Monographs*

Asymptotic Approximations

Sir Harold Jeffreys

A corrected reprint of a book first published in 1962 and out of print since 1966, this book is intended as an introduction to the subject. The main theorems on asymptotic series are proved, and the theory of the method of steepest descents is given in some detail. 19 text figures. 30/- net

Computing Methods for Scientists and Engineers

L. Fox and D. F. Mayers

The primary purpose of this book is to enable the user to improve his use of the computing machine and to obtain more accurate and more meaningful solutions to problems in scientific computation. 2 text figures 45/- net. Paper covers 22/- net.

An Introduction to Applied Mathematics

J. C. Jaeger

This textbook is concerned with the means of applying mathematics (particularly differential equations) to the study of physical and engineering problems. It is still available in hard covers at 55/- net, and now appears for the first time in paper covers, 30/- net.

Oxford University Press
