

The Applied Probability Trust

The Applied Probability Trust is a non-profit-making organisation established in 1963 by three Australian sponsors with the collaboration of the London Mathematical Society. Its object is the advancement of research and publication in probability and more generally mathematics.

The Journal of Applied Probability was launched by the Trust in 1964. With an international editorial board, it was one of the first journals in the world devoted entirely to papers in probability theory and its applications. Starting from a fairly modest two issues in its first year, with about 400 pages, the Journal expanded rapidly, and in 1969 it was joined by a companion publication, *Advances in Applied Probability*. Like the Journal, *Advances* contains papers on applications of probability theory to the biological, physical, social and technological sciences: while the Journal is now reserved for shorter research papers and notes, *Advances* is devoted to review papers, longer research papers, the proceedings of conferences, and letters to the editor. A separate section on Stochastic Geometry and Statistical Applications has appeared since 1994.

The Trust also publishes *Mathematical Spectrum*, a magazine for student mathematicians in schools, colleges and universities, as well as the general reader interested in mathematics.

The publishing office of the Applied Probability Trust is located in the School of Mathematics and Statistics, University of Sheffield, England.
