# The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

G. H. BATEMAN

ASSISTANT EDITOR

LIONEL TAYLOR

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgement must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951), *Journal of Laryngology and Otology*, 65, 33. The titles of all Journals should be given without abbreviation.

It is most important that authors should verify personally the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks will normally be held by the Printers for three years, after which they will be destroyed. Any author is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS LTD., The Invicta Press, Ashford, Kent. Coloured illustrations will be charged to authors, unless a special grant is authorized by the Editor.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS LTD., The Invicta Press, Ashford, Kent.

7. The annual subscription is £8 (eight pounds sterling) post free; U.S.A. \$23 post free, and payable in advance.

8. Single copies of current or back numbers (when available) will be on sale at £1 (including postage) each.

9. All subscriptions, advertising and business communications should be sent to the publishers, or subscription agents.

## The successor to the world's most widely used clinical Audiometer.

**Take a look at all the advantages you get  
with this superb audiometer.**

- *Pure tone at eleven frequencies—now including 750 Hz*
- *Bone conduction at eight frequencies*
- *Narrow band masking via insert and headphones  
Automatic presentation*
- *ISO specification*
- *Trimpot calibration*
- *Continuously variable second channel for ABLB  
(Fowler) recruitment test*
- *Tone decay test*
- *Illuminated patient's signal*

**PLUS** *Calibrated speech audiometry via microphone or tape.*

# the complete de-bugging device

**clears both fungi and bacteria in ear infections**

*Candida albicans* and *Aspergillus niger* are isolated in over 20 per cent of cases of otitis externa, and if high success rates are to be achieved treatment must take account of this. Otoseptil® ear drops employs a very broad spectrum attack with efficient anti-inflammatory action.

The new antibiotic ester—neomycin undecylenate—provides potent dual bactericidal and antifungal activity.

Tyrosine (containing gramicidin and tyrocin) effectively eliminates resistant Gram-positive cocci, while Hydrocortisone alcohol exerts its characteristic anti-inflammatory action. Rapid tissue contact is ensured by the penetrant Ethylene oxide polyoxypropylene glycol condensate, which is incorporated in the clear liquid ear drop.

For pain relief, AUDAX® ear drops may be used concomitantly with Otoseptil® ear drops because they are completely miscible and compatible.

Full information is available on request.

# **A Short Textbook Ear Nose and Throat**

**R. Pracy**, FRCS, Director, Department of Otorhinolaryngology, University of Liverpool, Consultant Otorhinolaryngologist, United Liverpool Hospitals; **J. Siegler**, MB, BS, FRCS, DLO, Consultant Otorhinolaryngologist, United Liverpool Hospitals and Liverpool Regional Hospital; and **P. M. Stell**, MB, FRCS, Senior Lecturer, Department of Otorhinolaryngology, University of Liverpool.

A clear and concise account of ear, nose and throat surgery, emphasising those diseases with which the doctor will often have to deal during general practice. An explanation of how these diseases arise is given and the principles of treatment are laid down.

Intended for medical students, doctors in hospitals and general practice, otorhinolaryngologists . . .

**“Your otitis externa patient  
needs something that  
attacks infection and fungi  
and inflammation  
and pain and irritation...”**

**Audicort helps you attack all five at once!**

Otitis externa usually means bacterial infection and fungal infection. So prescribe Audicort, the only ear drops with the five-way action.

Neomycin against bacteria plus undecylenic acid against fungi...plus triamcinolone acetonide against inflammation and irritation, benzocaine against pain.

# "A safe and effective method of treating house dust mite sensitivity"<sup>1</sup>

This was the conclusion reached by a group of British clinicians, in a preliminary report on ALLPYRAL-MITE FORTIFIED HOUSE DUST.

For those patients with house dust mite sensitivity, ALLPYRAL-MITE FORTIFIED HOUSE DUST offers specific hypo-sensitisation therapy; the preliminary report, on an uncontrolled trial, suggests that good results might be achieved in as many as 83% of patients.

1. Munro-Ashman, D. et al (1970) – IN PRESS.

## Allpyral mite fortified house dust

Like all Allpyral allergen extracts, mite fortified house dust is prepared by pyridine extraction and alum precipitation. This type of extract has been shown to give fewer reactions than the traditional aqueous extracts.

Menière's syndrome is a specific condition  
Now there is a specific treatment

**Serc**<sup>®</sup>  
betahistine

Menière's syndrome was first clearly defined over a century ago and since then has been recognised as a distinct disease entity characterised by vertigo, tinnitus and loss of hearing, frequently accompanied by nausea, earache and/or headache. To date, treatment of Menière's syndrome has been mostly empirical in nature and variable in its results. But now there is SERC – a new and specific treatment for Menière's syndrome. There is evidence that SERC acts against all the major manifestations of Menière's syndrome. Its effect on the episodes of vertigo, often the most disturbing symptom, is most striking<sup>1</sup>. SERC has been found to diminish, over a period of time, the intensity of tinnitus<sup>2</sup>. And it may also arrest hearing loss<sup>3</sup>. SERC is supplied as tablets containing 8 mg. betahistine dihydrochloride, in bottles of 100 tablets. Further information is available on request.
