CAMBRIDGE

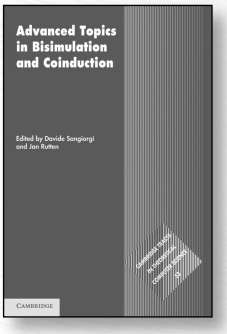
NOTEWORTHY TITLES IN KNOWLEDGE ENGINEERING FROM CAMBRIDGE UNIVERSITY PRESS!

Advanced Topics in Bisimulation and Coinduction

Edited by Davide Sangiorgi *and* Jan Rutten

Cambridge Tracts in Theoretical Computer Science

$99.00: Hardback: 978-1-107-00497-9: 340 pp.

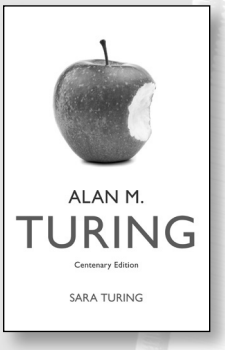


Alan M. Turing

Centenary Edition

Sara Turing
Afterword by John F. Turing
Foreword by Lyn Irvine *and* Martin Davis

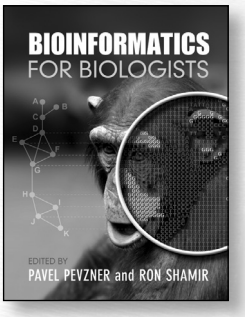
$29.99: Hardback: 978-1-107-02058-0: 194 pp.



Bioinformatics for Biologists

Edited by Pavel Pevzner *and* Ron Shamir

$150.00: Hardback: 978-1-107-01146-5: 392 pp.
$60.00: Paperback: 978-1-107-64887-6

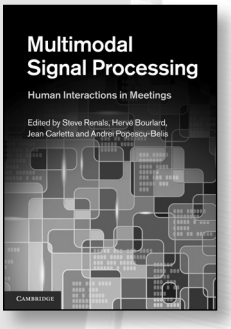


Multimodal Signal Processing

Human Interactions in Meetings

Edited by Steve Renals, Hervé Bourlard, Jean Carletta, *and* Andrei Popescu-Belis

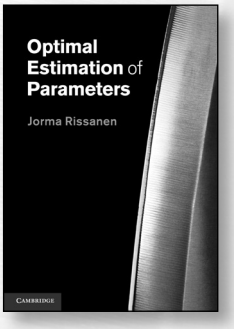
$120.00: Hardback: 978-1-107-02229-4: 286 pp.



Optimal Estimation of Parameters

Jorma Rissanen

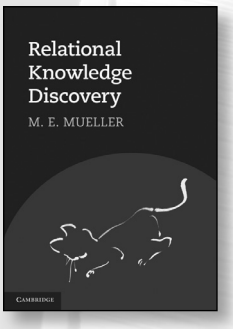
$90.00: Hardback: 978-1-107-00474-0: 170 pp.



Relational Knowledge Discovery

M. E. Müller

$99.00: Hardback: 978-0-521-19021-3: 278 pp.
$47.00: Paperback: 978-0-521-12204-7

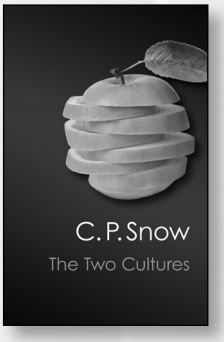


The Two Cultures

C. P. Snow
Introduction by Stefan Collini

Canto Classics

$19.99: Paperback: 978-1-107-60614-2: 182 pp.



Prices subject to change.

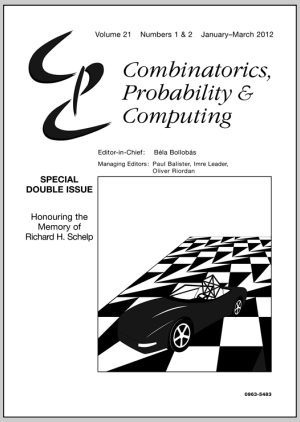
CAMBRIDGE JOURNALS

Combinatorics, Probability & Computing

Editor-in-Chief
Béla Bollobás, *DPMMS, Cambridge, UK; University of Memphis, USA*



Published bimonthly, *Combinatorics, Probability & Computing* is devoted to the three areas of combinatorics, probability theory and theoretical computer science. Topics covered include classical and algebraic graph theory, extremal set theory, matroid theory, probabilistic methods and random combinatorial structures; combinatorial probability and limit theorems for random combinatorial structures; the theory of algorithms (including complexity theory), randomised algorithms, probabilistic analysis of algorithms, computational learning theory and optimisation.

The knowledge engineering review

Notes for Contributors

Editorial policy
The Knowledge Engineering Review has been established to provide a general source of information and analysis in all areas relevant to research and development in knowledge based systems and applied artificial intelligence. The editors wish to encourage careful preparation of original papers analysing developments in the field. In particular we wish to see tutorial and survey articles, and commentary, criticism and debate. Primary research papers on specialised technical topics are unlikely to be appropriate but research papers on broad topics such as development methodology or general evaluations of tools and techniques, are of interest. Descriptions of specific projects or particular computer systems will be considered if their presentation draws out general issues in the design, implementation or impact of knowledge based systems.

Submission of manuscripts
Contributions for publication should be submitted as PDF files in an email attachment to either Professor Simon Parsons, Department of Computer and Information Science, Brooklyn College, City University of New York (parsons@sci.brooklyn.cuny.edu) or to Dr Peter McBurney, Department of Computer Science, University of Liverpool, UK (mcburney@liverpool.ac.uk). Submission implies that the manuscript has not been published previously, nor currently submitted for publication elsewhere. Upon acceptance of a manuscript, the author will be asked to transfer copyright to the publisher.

All contributions, whether articles, correspondence or reviews, must be sent in electronic form. Authors are encouraged to provide the final version of the contribution in LaTeX, TeX, or Word format.

Authors using LaTeX should ideally use the KER LaTeX style file which can be obtained using anonymous FTP from the internet address ftp://ftp.cambridge.org/pub/texarchive/journals/latex/ker-cls. In case of difficulties obtaining these files, there is a help-line available via e-mail; please contact texline@cup.cam.ac.uk. Tables and figures should be embedded in the article in the usual way, with figures in .eps form, which should be also supplied as separate files.

Contributions should follow the general style of papers in recent issues of The Knowledge Engineering Review. The author is invited to nominate up to five possible referees, who will not necessarily be used.

Articles must be accompanied by a brief, informative rather than indicative, abstract.

If you are not using the ker.cls file, then please adopt the following layout rules. Headings should be set out clearly but not underlined. Primary headings should be in lower case, at margin, with Arabic numeral; subheadings should be numbered 2.a., 2.b., etc., and tertiary headings, 2.a.1., 2.a.2. No cross-references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.2. The SI system of units should be used. The author should mark in the margin of the manuscript where figures and tables may be inserted. References to points in larger works should, where possible, quote the page reference, e.g. Ager, 1981, p. 102.

Tables should be typed with double-line spacing on sheets separate from the running text. Each table must have a caption that will make the data in the table intelligible without reference to the text.

Illustrations should be drafted for reproduction as full page (148 mm) width. Originals should normally be drawn at twice final area and must be sent in a flat package; larger drawings may delay publication. Lettering should be of a size so that when reduces the smallest lower-case letters will not be less than about 1 mm. Avoid gross disparities in lettering size on a drawing. Duplicates of illustrations should be sent, and may be prints or, preferably, photocopies reduced to final size. Illustrations in the text, both line drawings and photographs for halftone reproductions, will be referred to as figures (Fig. 2, 2a, etc.). Folding plates will not be accepted. Figures composed of photographs should be glossy prints presented at publication scale. Figure captions must be typed with double-line spacing on sheets separate from the running text.

The preferred graphics package is Freehand 5 but files from many others can be accepted. Please indicate clearly the file format (e.g. TIFF, EPS, DCS, Freehand etc), computer operating system and graphics software used for originating the artwork files. The typefaces used in electronic artwork supplied should be restricted to Monotype, Adobe and Bitstream font libraries. Illustrations should be supplied as EPS files and never as Postscript files, or as the native format files from the graphics package used. They should be accompanied by laser proofs with the name and version number of the graphics package used, and also the names of the fonts used.

References
The accuracy of references is the responsibility of authors. References must be double-spaced and spelt out in full, e.g:

Gale, W A, ed 1986. *Artificial Intelligence and Statistics,* Reading, Massachusetts: Addison-Wesley.

Pearl, J 1984. Heuristics. I*ntelligent search strategies for problem solving,* Reading, Massachusetts: Addison-Wesley.

Tie-Cheng Wang and Bledsoe, W W, 1987. "Hierarchical deduction" *Journal of Automated Reasoning* **3** (1) pp 1–34.

Pau, L F, 1986. "Survey of expert systems for fault detection, test generation and maintenance" *Expert Systems,* **3** (2) pp 100–111.

Unpublished work should normally be referred to in the text parentheses as, for example, 'private communication' or 'unpub. Ph.D. thesis, Univ. London, 1988', and not included in the reference list unless in the press.

Proof Reading:
Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. No page charge is made.

Offprints:
No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.
