

# Effects of Gaseous Air Pollution in Agriculture and Horticulture

new

Edited by

**M H Unsworth** BSc, PhD  
University of Nottingham School of Agriculture

The 32nd Nottingham Easter School brought together experts from academic and industrial backgrounds to review this important area of research.

The book reviews the progress of research into the physiological and biochemical responses of crops and

University of Guelph, Ontario

grassland to gaseous pollutants: it then examines the effects of pollutants and pollutant mixtures and interactions on developmental processes such as flowering and fruiting. The final chapters place the topic of air quality in a broader perspective, considering the genetic basis of sensitivity to air pollution stress and the directions to be taken by future research.
