AUTHOR INDEX FOR VOLUME 101

AHMED, S. and LIM, M. F.; On the Euler characteristics of signed Selmer groups 238
ALI, E. J.; Canonical dual finite element method for solving nonconvex mechanics and topology optimisation problems 172
ALJUAID, M. and COLONNA, F.; On the harmonic Zygmund spaces 466
ALLU, V.; see GHOSH, N. 130
ALODAT, T.; On asymptotics of functionals of random fields with long-range dependence 518
ALOMARI, H. M.; Statistical analysis of long-range dependent random processes and fields 345
ALTAVILLA, A. and BALLICO, E.; Algebraic surfaces with infinitely many twistor lines 61
AN, L.; see YANG, D. 255
ANDERSEN, P. J.; Degree bounded geometric spanning trees with a bottleneck objective function 170
ARMSTRONG, B.; Simplicity of twisted C*-algebras of topological higher-rank graphs 512
BALLICO, E.; see ALTAVILLA, A. 61
BETTIO, E. and JABARA, E.; On a problem of Praeger and Schneider 80
BOUMAHDI, R., KIHEL, O., LARONE, J. and YADJEL, M.; A new proof of the Carlitz–Lutz theorem 56
BRZDĘK, J. and EL-HADY, E.-S.; On approximately additive mappings in 2-Banach spaces 299
CARNAFFAN, S.; Anomalous diffusion processes: Stochastic models and their properties 514
CATALANO, L. and CHANG-LEE, M.; On the connection between differential polynomial rings and polynomial rings over nil rings 438
CHALEBGWA, T. P.; Algebraic values of certain analytic functions defined by a canonical product 415
CHAMBERLAIN, R.; Subgroups with no abelian composition factors are not distinguished 446
CHAN, T. H.; Gaps between divisible terms in $a^2(a^2 + 1)$ 396
CHANG-LEE, M.; see CATALANO, L. 438
CHEN, W.; see TU, Q. 496
CHI, Z. and SKIBA, A. N.; On a lattice characterisation of finite soluble *PST*-groups 247
CHOULLI, M.; New global logarithmic stability results on the Cauchy problem for elliptic equations 141
CHU, W.; Symmetric functions and multiple zeta values 426
COLONNA, F.; see ALJUAID, M. 466
DAI, L. and PAN, H.; Closed forms for degenerate Bernoulli polynomials 207

INFORMATION FOR AUTHORS

The *Bulletin of the Australian Mathematical Society* aims at quick publication of original research in all branches of mathematics. To ensure speedy publication, only articles which are sufficiently well presented, able to be published without revision, and which are judged by the Editor (often in consultation with an Associate Editor) to be competitive are refereed. This policy is in the interests of authors, as a quick rejection is better than a slow rejection. The *Bulletin* receives more than five times the material that can be published, therefore there are many commendable papers not accepted. Editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after peer review.

Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere. For a paper to be acceptable for publication, not only should it contain new and interesting results, but also

(i) the exposition should be clear and attractive, and

(ii) the manuscript should be in publishable form, without revision.

Further information regarding these requirements may be found through our website www.austms.org.au/Bulletin. Authors are asked to avoid, as far as possible, the use of mathematical symbols in the title.

Articles should be prepared in LaTeX using $\mathcal{A}\mathcal{M}\mathcal{S}$-LaTeX packages and submitted as a PDF file via our journal management system, at www.austms.org.au/Publications/Submissions/BAustMS. This permits authors to track their papers through the editorial process. Recent versions of TeX are able to produce PDF files directly. A LaTeX class file for the *Bulletin* can be downloaded from the website. Authors who need assistance may email the secretary of the *Bulletin* at editor@bulletin.austms.org.au.

Authors are advised to keep copies of all files of the submitted article; the *Bulletin* will not accept responsibility for any loss.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are in preparation or submitted. Where the work cited is not readily accessible (for example, a preprint) a copy of the article should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 150 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification and Key Words. Authors should include a few key words and phrases and one or more classification numbers, following the American Mathematical Society 2010 Mathematics Subject Classification for all codes. Details of this scheme can be found on the web at www.ams.org/msc.

4. Abstracts of PhD Theses. The *Bulletin* endeavours to publish abstracts of all accepted Australasian PhD theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within six months of the degree being approved.

Table of Contents

On the crossing number of the join of the wheel on five vertices with the discrete graph
Staš, M. 353

A Ramsey type result for Latin squares
Zelenyuk, Y. & Zelenyuk, Y. 362

New supercongruences involving products of two binomial coefficients
Sun, Z.-H. 367

A conditional density for Carmichael numbers
Wright, T. 379

Directions sets: A generalisation of ratio sets
Leonetti, P. & Sanna, C. 389

Gaps between divisible terms in $a^2(a^2 + 1)$
Chan, T. H. 396

A shifted convolution sum of d_3 and the Fourier coefficients of Hecke–Maass forms II
Tang, H. C. 401

Algebraic values of certain analytic functions defined by a canonical product
Chalebgwa, T. P. 415

Symmetric functions and multiple zeta values
Chu, W. 426

On the connection between differential polynomial rings and polynomial rings over nil rings
Catalano, L. & Chang-Lee, M. 438

A cocomplete but not complete abelian category
Rickard, J. 442

Subgroups with no abelian composition factors are not distinguished
Chamberlain, R. 446

On the periodicity of transcendental entire functions
Liu, X. & Korhonen, R. 453

On the harmonic Zygmund spaces
Aljuaid, M. & Colonna, F. 466

On a class of nonlinear Schrödinger equations on finite graphs
Man, S. 477

The first cohomology group of Banach inverse semigroup algebras with coefficients in *L*-embedded Banach bimodules
Ghahramani, H. 488

The distributional *k*-Hessian in fractional Sobolev spaces
Tu, Q., Chen, W. & Qiu, X. 496

Abstracts of PhD Theses

Isogenies of abelian varieties in cryptography
Ti, Y. B. 508

On base radical theory in finite settings
Thornton, L. 510

Simplicity of twisted C*-algebras of topological higher-rank graphs
Armstrong, B. 512

Anomalous diffusion processes: Stochastic models and their properties
Carnaffan, S. 514

On asymptotics of functionals of random fields with long-range dependence
Alodat, T. 518

Applications of mathematical modelling in oncolytic virotherapy and immunotherapy
Jenner, A. L. 522
