Exploring New Frontiers in the Life Sciences

Protein Science

Published for The Protein Society, **Protein Science** is dedicated to the exploration of all scientific aspects of protein molecules, the 'building blocks of life'. Appearing monthly this innovative journal presents research by leading scientists, encompassing many research settings and methodologies, and cutting across restrictive disciplinary lines. The wide scope of **Protein Science** includes the structure, function and biochemical significance of proteins, their role in molecular and cell biology, genetics and evolution, as well as their regulation and mechanism of action.

Electronic Protein Science

As a leading innovator in scientific publishing technologies, **Protein Science**, now publishing Volume 5, is continually enhancing its electronic dimension. For 1996, it has on-line text and graphics, providing faster publication and greater access to original proteins research.

Members of The Protein Society have access to the 1996 electronic edition without additional charge.

Features

- Full length original research papers & shorter contributions
- On the Record – concise reports of recent developments
- Recollective series – significant discoveries & how they influenced the subsequent course of scientific pursuits are recalled
- Rapid publications
- Lists of forthcoming papers
- Corporate members news
- Calendars of meetings

Subscription Information

Volume 5, 1996 Monthly.

£415 Institutional hard copy subscription; £125 Individual hard copy subscription.

£581 Institutional subscription with electronic access; £115 Biochemical Society member subscription with electronic access.

Prices includes delivery by air. Special arrangements exist for members of The Protein Society.

Announcing a major new monthly journal!

RNA

The Official Publication of The RNA Society

RNA, the official publication of the new RNA society, provides a rapid publication of significant original research in all areas of RNA structure and function in eukaryotic, prokaryotic and viral systems.

Editor

Timothy W. Nilsen, *Case Western Reserve University*

Associate Editors

Thomas R. Cech, *University of Colorado*
Chris L. Greer, *University of California, Irvine*
Christine Guthrie, *University of California, San Francisco*
Robert M. Krug, *Rutgers University*
Reinhard Lührmann, *Philips University, Marburg*
Dino Moras, *CNRS, Strasbourg*
James Ofengand, *Roche Institute of Molecular Biology*
Nancy Standart, *University of Cambridge*
Joan A. Steitz, *Yale University*
Marvin Wickens, *University of Wisconsin*

INSTRUCTIONS FOR CONTRIBUTORS

GENETICAL RESEARCH publishes original work on all aspects of genetics, or in any field of research which has an important bearing on genetics. Reviews of topical interest will also be considered. Papers will be submitted to referees, and will generally be printed in order of acceptance. Short papers (see below) will be given priority in publication.

CONTRIBUTIONS are welcomed from scientists of all nationalities but must be written in English. Papers should be sent to one of the Executive Editors (see addresses inside front cover), or to a member of the Editorial Board with a particular interest in that area of genetics. Submission of a paper will be taken to imply that it is unpublished and is not being considered for publication elsewhere. Papers should be as concise as clarity permits, and illustrations should be restricted to the *minimum needed*.

SHORT PAPERS This category is designed for concisely written reports of work for which rapid publication is considered desirable. Such papers will normally be published within three months of receipt in acceptable form. They should not exceed 4 pages of print in length, and should include a summary.

TYPESCRIPTS A top copy and two other copies should be submitted. The top copy should be typed with double-spacing on one side of good quality paper, leaving margins of about 1½ inches at the left-hand side and at the top and bottom of each sheet. Each copy should include a complete set of illustrations. The title should ordinarily identify the organism. The address of the laboratory at which the work was carried out will be printed with the authors' names at the head of the paper, and changes of address may be added in footnotes. A footnote to the title page should also give the name and address to whom reprint requests may be made. Sources of financial support should be included with other acknowledgements at the end of the text. The title page of the typescript should include a short title for running headlines (limited to 50 letters and spaces), and the name and address of the author (or his proxy) to whom the proofs are to be sent, under the heading: *Proofs to be sent to . . .* Main headings should be typed in capitals and (except summary and references) numbered consecutively. Subheadings should be typed in lower case, and underlined except for those words and symbols which would be italicized in the text. Subheadings should be numbered (i), (ii), etc., within each main heading. **Numeral 1 and letter e! : if your PC uses one symbol for both, please make clear to the printer which is intended in formulae, gene symbols, etc.**

SUMMARY The summary will be printed at the beginning of the paper. It should give a concise abstract of the significant content and conclusions of the paper, in a form suitable for abstracting journals to use, and should not exceed 250 words.

ILLUSTRATIONS All illustrations, including photographs, diagrams, graphs etc. are to be labelled consecutively Figure 1, 2 . . . according to their relative positions in the text. Each figure should have a legend to be printed underneath it. Photographs should be supplied as unmounted glossy prints, with a sketch or separate set to show the arrangement required when several photographs are to form one figure. The names of the authors and the orientation of the figure should be indicated on the back

of each photograph. *Diagrams* should be about twice the size of the printed figure, but not larger than 12 × 8 inches, unless exceptionally complicated, and the thickness of lines and size of points should be determined accordingly. They may be submitted as glossy photographic prints or be drawn. The lettering on drawings should be lightly inserted *in soft pencil only*, so that the printer can put in the finished lettering. Legends to illustrations must be given on a separate sheet of paper. Each illustration must have the name of the author and figure number pencilled on the back.

TABLES Each table should be typed on a separate sheet of paper and its approximate position in the text indicated on the typescript. Each should be numbered and carry an appropriate title. The table should be designed, whenever possible, to be printed in the normal orientation of the text. The data should be grouped so as to make the use of rules unnecessary. Vertical rules, in particular, are expensive to print, and will only be included at the Editor's discretion. Table footnotes should ordinarily employ the symbols *, †, ‡, §, ||, ¶, **, etc., in that order.

SYMBOLS Gene and mathematical symbols should generally be printed in italics. Please underline those to be italicized when they appear in the text and tables. Bold letters add to printing costs and should only be used where they are necessary to avoid confusion. The author must assume responsibility for the accurate printing of complex mathematical formulae submitted in typewritten form, by differentiating between letters and numbers which are open to misinterpretation, and identifying all Greek, Hebrew and script letters by means of marginal notes at their first appearance. Note that Greek symbols cannot be italicized and that '+' as the symbol for a wild-type allele should not be italicized.

NOMENCLATURE Wherever possible, standardized nomenclature should be employed. The author should refer to the following publications for guidance: Novick *et al.* (*Bacteriological Reviews* **40**, 168–189) for plasmids; O'Brien (Ed.), *Genetic Maps* **6**, Cold Spring Harbor 1993, for recent information on most species and recent gene lists.

REFERENCES should follow the normal usage in the journal. In the list of references at the end of the paper, *both titles of articles and names of periodicals* should be written out in full.

PROOFS Two sets of page proofs, together with the typescript of each paper will be sent to the author. The printers' marked proof should be returned after correction to the Executive Editor, together with the typescript. Excessive alterations, other than corrections of printers' errors, may be disallowed or charged to the author. Corrections should be made using the symbols in British Standard 1219: 1958, or its shortened version B.S. 1219C: 1958.

OFFPRINTS Fifty offprints of each paper, or short paper, are provided free of charge. Additional offprints may be ordered in the form sent out with proofs, provided this is returned within fourteen days of receipt.
