RADIO-AID

NOTED FOR
SERVICE
AND
SATISFACTION

THE "CRYSTAL" RADIO-AID

The Radio-Aid may be used with an accumulator or standard dry battery to supply the low tension current. This is made possible by the Adaptor illustrated on the left of the instrument, and is a patented and exclusive feature of the Radio-Aid.

The Radio-Aid has an appearance of dignity and charm, but being of robust construction will stand up to many years of hard wear, and commends itself to the discerning patient. Its brilliant performance converts even the most hardened sceptic.

PRESCRIBE THE EASY EFFECTIVE METHOD

When spraying, the patient can hold his head in a natural position, yet the solution spreads throughout the nasal cavity, assuring thorough treatment. Effective dropper-application, on the other hand, requires a complicated posture technique which patients are apt to neglect in home treatment.

FOR young children and infants who are often such difficult patients, the use of

Antiphlogistine
BRAND TRADE MARK DRESSING

is most serviceable.

Especially in such cases as Pneumonia, Bronchitis, and Broncho-pneumonia, where the least possible disturbance of the little patient is desirable, only one application of the Dressing in 24-36 hours is often all that is necessary.
