

## Information for Contributors

1. Manuscripts must be written in English. All manuscripts will be referred to acknowledged experts in the subject. Only those receiving favourable recommendations from the referees will be accepted for publication. Manuscripts may be sent to any Board member, any Associate Editor or the Editor.
2. The typescript should be double spaced, on one side of good grade paper, allowing a reasonable left-hand margin. An original and two copies should be submitted with the author's full postal address, position and affiliations.
3. The title and section headings should highlight the significant points. A short abstract should precede the main text.
4. One copy of photographs, prints or transparencies of good quality and unmarked should be submitted. Where lines or lettering are to appear on the photograph, an additional print should be supplied appropriately marked. Each should have, lightly written on the back, the author's name, the figure number and an indication of which is the top of the picture.
5. One copy of each line diagram should be submitted at approximately twice final size and unlettered. Diagrams must be drawn in indian ink on plain white or transparent paper. A second copy should be supplied with lettering included. The author's name and the figure number should be written on this copy.
6. Tables should be typewritten on separate sheets. Avoid, where possible, very wide tables.
7. References and footnotes should be cited according to the Harvard (Author/date system), also known as the "British form". In the text, author and year are cited in brackets e.g. "... was found by McCarthy (1980; 1980a) . . ." or "(Emmett *et al.* 1972)". Full references are listed in alphabetic order at the end of the paper. References are not numbered. An example of a reference list is:  
DEUTSCH, C. & KLARSFELD, S. 1973 *Phys. Rev.* **A7**, 2081.  
NICHOLSON, D. R. 1983 *Plasma Theory*, (John Wiley, New York).  
OOMURA, H. *et al.* 1982 *Res. Rep ILE*, ILE-8207p.  
OOMURA, H. *et al.* 1982a *Trans. ANS*, **43**, 617.  
Note that the year of publication appears after the author's name. If possible, all authors names should be listed in preference to "*et al.*" If one author or team is referred to more than once in any year, the letters a, b, etc should be added after the year to distinguish the individual references.
8. Correction to proofs should be restricted to printers' errors only. Authors are entitled to 25 offprints of their article free of charge. Additional offprints may be purchased if they are ordered on the form sent with the proofs.

# LASER AND PARTICLE BEAMS

Volume 5 Part 2 May 1987

**Alton C. Williams:** Guest Editor – Papers from NASA conference on Double Layers in Plasmas

**Introduction** 167

## Conference Papers

**Joseph E. Borovsky:** Double layers and plasma-wave resistivity in extragalactic jets: cavity formation and radio-wave emission 169

**G. Chanteur:** Current driven weak double layers 177

**L. R. Lyons:** Conditions for double layers in the Earth's magnetosphere and perhaps in other astrophysical objects 191

**A. C. Williams:** The formation of a double layer leading to the critical velocity phenomenon 197

**M. Temerin and F. S. Mozer:** Double layers above the aurora 203

**Hans L. Pécseli:** Ion phase-space vortices and their relation to small amplitude double-layers 211

**Chung Chan:** Formation mechanisms of laboratory double layers in triple plasma devices 219

**Nagendra Singh, H. Thiemann and R. W. Schunk:** Electric fields and double layers in plasmas 233

**N. Hershkowitz, C. Forest, E. Y. Wang and T. Intrator:** Pumping potential wells 257

**M. P. Goldsworthy, F. Green and H. Hora:** A new hydrodynamic analysis of double layers 269

**J. Teichmann:** Linear Vlasov stability in one-dimensional double layers 287

**M. K. Hudson, T. L. Crystal, W. Lotko and C. Barnes:** Weak double layers in the auroral ionosphere 295

**W. Lennartsson:** Some aspects of double layer formation in a plasma constrained by a magnetic mirror 315

**T. Carpenter and S. Torvén:** Some dynamical properties of very strong double layers in a triple plasma device 325

**Philip Leung:** A laboratory investigation of potential double layers 339

**R. L. Lysak and Mary K. Hudson:** Effect of double layers on magnetosphere-ionosphere coupling 351

**Bruce L. Smith and Hideo Okuda:** Particle simulation of auroral double layers 367

**Robert A. Smith:** Anomalous transport in discrete arcs and simulation of double layers in a model auroral circuit 381

## Regular Papers

**T. Tajima and S. Eliezer:** Muonic x-ray laser assisted by catalyzed fusion of deuterium and tritium 393

**V. I. Kukulin, V. M. Krasnopol'sky and V. T. Voronchev:** The feasibility of measuring the nuclear reaction cross sections at energies of several KeV in a target under laser compression 399

**Carlos Montes and Jean Cieste:** Optical turbulence in multiple stimulated Brillouin backscattering 405
