

Insect Science and its Application

The International Journal of Tropical Insect Science

Aims and Scope

Insect Science and its Application deals comprehensively with all aspects of scientific research targeted on tropical insects (and related arthropods), and the application of new discoveries to such diverse fields as pest and vector management and the use of insects for human welfare.

A distinctive feature of the journal is its multi- and interdisciplinary nature, which transcends the traditional boundaries of entomology.

Its second feature is its concentration on the recording and reviewing of the progress of insect science in the tropical and subtropical regions of the world. Thus, without excluding any area of the wide field encompassed by insect science, the journal will accept manuscripts in environmental physiology, the regulation of development and reproduction, population modelling, chemical ecology, natural products chemistry, plant resistance, host/insect relations, behaviour of tropical pest species, epidemiology of tropical diseases, vector biology, pest and vector management research, entomo-meteorology, insects in relation to farming systems, forest entomology, insect pathology, social insects and arthropods, and the use of insects. It is the intention of the Editors to have manuscripts published rapidly, consistent with the needs of quality control.

In addition to articles of original research, the journal also publishes book reviews, announcements and reports of meetings and mini-reviews. Each regular issue of the journal usually contains a short review article on a critical or rapidly developing area of tropical insect science; normally the Editors will have invited an author to contribute such a mini-review.

Information for Contributors

1. All papers for publication in *Insect Science and Its Application* should be submitted directly to the Editor-in-Chief, Professor Thomas R. Odhiambo, Scientific Editorial Services, P.O. Box 59900, Nairobi, Kenya. Papers should be mailed in a strong, preferably linen, envelope, as they may otherwise arrive in a damaged condition.
2. Papers should be in English or French and be original contributions in the field of tropical insect science. Each paper should have a summary in the form of an abstract in both English and French.
3. Submission of a paper implies that it has not been published previously, that it is not under consideration for publication elsewhere, and that if accepted for *Insect Science and Its Application* the authors will transfer copyright to Pergamon Press as is customary. Articles and illustrations become the property of the journal. There is no page charge for papers accepted for publication.
4. Manuscripts and illustrations must be submitted in triplicate to ensure efficient refereeing, and the author should retain a copy. In the case of multiple authorship the authors should indicate who is to receive correspondence.
5. Manuscripts must be typewritten with double spacing (including the reference list), and with wide margins on one side of the paper only. Authors are requested to keep their communications as concise as possible. Footnotes should be avoided, and italics should not be used for emphasis. A running head of not more than 30 letters should be supplied.
6. Twenty-five free reprints will be supplied to the first-named author of each paper published in the journal. Detailed Instructions to Authors for the preparation of manuscripts are available from the Editor-in-Chief or the Publishing Office.

Insect Science and its Application

The International Journal of Tropical Insect Science

VOLUME 6 NUMBER 6

1985

CONTENTS

- T. C. BANERJEE and M. CHATTERJEE 633 Seasonal changes in feeding, fat body and ovarian conditions of *Nezara viridula* L. (Heteroptera: Pentatomidae)
- R. K. SAINI 637 Sound production associated with sexual behaviour of the tsetse, *Glossina morsitans morsitans*
- B. M. KHAEMBA and M. W. OGENGA-LATIGO 645 Effects of the interaction of two levels of the black bean aphid, *Aphis fabae* Scopoli (Homoptera: Aphididae), and four stages of plant growth and development on the performance of the common bean, *Phaseolus vulgaris* L., under greenhouse conditions in Kenya
- TITUS K. MUKIAMA 649 Y- autosome genetic sexing strain of *Anopheles albimanus* (Diptera: Culicidae)
- M. N. UKWUNGWU and J. A. ODEBIYI 653 Incidence of *Chilo zacconius* Bleszynski on some rice varieties in relation to plant characters
- YEBOA A. DUODU and RUTH C. ADDO-ASHONG 657 Consumption and digestion of four cultivars of *Solanum melongena* by *Selepa docilis* larvae (Lepidoptera: Noctuidae)
- A. K. CHAKRAVARTHY and P. K. ANANDA RAO 661 Dispersion patterns, sample unit-sizes and techniques for sampling cotton jassid [*Amrasca biguttula biguttula* (Ishida)] and whitefly (*Bemisia tabaci*, Genn.)
- DISMAS A. OTIENO, A. HASSANALI, F. D. OBENCHAIN, A. STERNBERG and R. GALUN 667 Identification of guanine as an assembly pheromone of ticks
- PUSHPINDER J. RUP and ANITA BANIWAL 671 Responses of *Zaprionus paravittiger* (Drosophilidae: Diptera) to antijvenile hormone, precocene₁
- ALIYAGEEN M. ALGHALI 677 Larval instars determination for *Chilo partellus* Swinhoe (Lepidoptera: Pyralidae) reared on sorghum
- J. O. FASORANTI and O. M. OLAGUNJU 681 Food selection by the variegated grasshopper, *Zonocerus variegatus*, L. Feeding bioassay using crops and weeds
- NEENA and J. P. SINGH 687 Changes in the free amino acids content during the post-embryonic development of *Apis cerana indica* (Hymenoptera: Apidae)
- J. HUIGNARD, B. LEROI, I. ALZOUMA and J. F. GERMAIN 691 Oviposition and development of *Bruchidius atrolineatus* (Pic) and *Callosobruchus maculatus* (F.) (Coleoptera: Bruchidae) in *Vigna unguiculata* (Walp) cultures in Niger
- C. S. PAWAR, V. S. BHATNAGAR and D. R. JADHAV 701 *Heliothis* species and their larval parasitoids on sole and intercrop safflower in India
- M. A. SAMPSON and R. KUMAR 705 Borer damage and estimation of loss caused by sugar-cane stem-borers in southern Ghana
- MARY L. A. OWAGA and A. CHALLIER 711 Catch composition of the tsetse *Glossina pallidipes* Austen in revolving and stationary traps with respect to age, sex ratio and hunger stage
- A. CHALLIER and F. L. LAMBRECHT 719 A new morphological character of superior claspers to differentiate *Glossina pallidipes* Austen from *Glossina longipalpis* Wiedemann (Diptera: Glossinidae)
- New Patents i
- Software Survey Section I
- Questionnaire III
