

Online Oryx

Access to the electronic version of *Oryx* is something many of our members have asked for. We are now therefore delighted to be able to offer online access to the journal. Online access provides readers with:

- electronic access to past *Oryx* issues dating from 1950
- instant access (no waiting for the post!)
- access to the *Oryx* archive search facility
- the opportunity to reduce their use of paper and packaging

Whether you are an existing *Oryx* subscriber or are considering becoming a member of Fauna & Flora International to gain access to one of conservation's foremost journals, *Oryx* online is available to all. *Oryx* is valued around the world, both by those who read the journal and by the scientists who publish in, and use the journal, for their conservation work.

'Your support is much appreciated and comes as a breath of fresh air in this highly tensed academic atmosphere.'

— Malika Virah-Sawmy, conservationist in Madagascar and *Oryx* author

'I have read the July issue from cover to cover and find it really informative for my MSc in Wildlife Management and Conservation.'

— Kenny Armstrong, student

Online access to *Oryx* is available to both existing and new members. Those wishing to join Fauna & Flora International as a member can do so by visiting

www.fauna-flora.org/membership.php

Once you have subscribed we will contact you to ask whether you would prefer to receive *Oryx* online or as a printed copy. If you change your mind later your preference can be amended at any time.

Existing members can contact Fauna & Flora International's Membership Secretary Ken Richard on +44 (0)1223 579472 or ken.richard@fauna-flora.org to find out more and to discuss their preference. Please rest assured that if we don't hear from you we will continue to send a printed copy of *Oryx* to you as we have done in the past.

A LIFETIME DEDICATED TO CONSERVATION

Our Vision

A sustainable future for the planet, where biodiversity is effectively conserved by the people who live closest to it, supported by the global community

Our Mission

Fauna & Flora International acts to conserve threatened species and ecosystems worldwide, choosing solutions that are sustainable, based on sound science and take account of human needs

“ I have been a member of Fauna & Flora International since the 1950s... investment in the work of FFI is truly an investment in the future of our planet ”

Sir David Attenborough

CAMBRIDGE

JOURNALS

Environmental Conservation

International Journal of Interdisciplinary Environmental Science

Published for the Foundation for Environmental Conservation

Editor

Nicholas V. C. Polunin, University of Newcastle, UK

Environmental Conservation is one of the longest-standing, most highly-cited of the interdisciplinary environmental science journals. It includes research papers, reports, comments, subject reviews, and book reviews addressing environmental policy, practice, and natural and social science of environmental concern at the global level, informed by rigorous local level case studies. The journal's scope is very broad, including issues in human institutions, ecosystem change, resource utilisation, terrestrial biomes, aquatic systems, and coastal and land use management. *Environmental Conservation* is essential reading for all environmentalists, managers, consultants, agency workers and scientists wishing to keep abreast of current developments in environmental science. Selected papers are made freely available online as part of **EC Perspectives**.

JOURNALS

Journal of Tropical Ecology

Editor

Ian Turner, Winchelsea, UK

Journal of Tropical Ecology publishes papers in the important and now established field of the ecology of tropical regions, either arising from original research (experimental or descriptive) or forming significant reviews. First published in 1985, *Journal of Tropical Ecology* has become a major international ecological journal. With clear, stimulating and readable reports of recent research findings, the journal provides a platform for the dissemination of information on all aspects of tropical communities and ecosystems

Journal of the Marine Biological Association of the United Kingdom

Published for the Marine Biological Association of the United Kingdom

Executive Editor

Dr. P. R. Dando, The Marine Biological Association of the UK, Plymouth, UK

Editor-in-Chief

Dr. Ann L. Pulsford, The Marine Biological Association of the UK, Plymouth, UK

JMBA is an international journal, publishing original research on all aspects of marine biology. It includes pioneering work on major issues concerning marine organisms and their environment. Subjects covered include: ecological surveys and population studies of marine communities; physiology and experimental biology; taxonomy, morphology and life history of marine animals and plants; and chemical and physical oceanographic work.

CAMBRIDGE
UNIVERSITY PRESS

Instructions for Contributors

Oryx—*The International Journal of Conservation*, published quarterly on behalf of Fauna & Flora International, is a journal of biodiversity conservation, conservation policy and sustainable use, and the interactions of these with social, economic and political issues. The journal has a particular interest in material with the potential to improve conservation management and practice. *Oryx* also supports the publishing and communication aspirations of conservation practitioners and researchers worldwide, and helps build capacity for conservation.

Articles (2,000–7,000 words), *Reviews* (<7,000 words), *Forum* papers (<4,000 words) and *Short Communications* (<2,000 words) are invited on topics relevant to the journal's focus, including:

- The nature and results of conservation initiatives, including case studies
- Research on the sustainable use of wild species
- Research on the status of threatened species, taxonomic groups or habitats
- Reviews of conservation policy, strategy and legislation in practice
- Planning for species and biodiversity conservation
- The working of international conservation conventions
- The history of conservation, including the role of key people, organizations and initiatives
- The causes and consequences of biodiversity loss
- Case studies of conservation projects and programmes
- The social, economic and political dimensions of conservation

Reviews provide comprehensive overviews of a particular conservation topic. *Forum* papers promote debate about current and controversial issues, usually with critical responses commissioned from one or more authors. *Articles* on the status of threatened species, taxonomic groups or habitats should generally be <4,500 words and have, where relevant, a context beyond that of the subject studied.

Submission Online at <http://mc.manuscriptcentral.com/oryx> (see <http://www.oryxthejournal.org> for further advice). **Upon submission the Corresponding Author will be required to confirm that: (1) the submitted manuscript has not been published or submitted for publication elsewhere, (2) all authors have read the submitted manuscript and agreed to its submission, and (3) all authors have abided by the Code of Conduct for authors contributing articles** (see *Oryx*, 35, 99–100 or <http://www.oryxthejournal.org>). If there is overlap with other articles, including any in press or in preparation, this should be stated and the articles in question sent to the Editor. Both quantitative and qualitative methodology used in the reported work should be appropriate to the research question and must be clearly described. Management recommendations should be made where appropriate, and details of any implementation provided.

Age of data Where relevant, dates of any fieldwork must be provided. *Oryx* publishes research with the potential to have an impact on conservation outcomes. This requires conclusions to be based upon the best available and up-to-date information and analysis and we therefore look carefully at all manuscripts in which conclusions are based on field data collected some time ago (generally >4 years). We recognize, however, the value of historical field or collection records but require evidence that these studies are directly relevant to effective conservation. Bear this policy in mind when submitting your manuscript and, if the data and/or associated analyses are not recent, justify, both in your cover letter and in the manuscript, the use of these data in terms of the conservation relevance of your findings.

Preparation of manuscripts Consult a recent issue of *Oryx* for general style. Contributions should be in English, with British English spelling and terminology, double-spaced, without footnotes, and with line numbers. Submissions, which can be a single file with all Tables, Figures, Plates and Appendices at the end or with text and other elements in separate files, must be in DOC format (not PDF). For submission, graphics can be in low to medium resolution as long as they are clearly legible, with publication-quality graphics to be provided upon any final acceptance. Cover page should contain title, word count (all inclusive except for Tables and Figure and Plate captions), and full mailing address, e-mail, and address at the time the research was carried out, if different, of the corresponding author and all additional authors. Pages to be numbered, and order of sections to be: cover page, main text, biographical sketches, Tables, Figure and Plate captions, Figures, Plates. Short Communications must not have any subheadings.

Title A succinct description of the work (≤20 words) preferably embodying either the aim or the overall conclusion.

Abstract In <250 words the aims, methods, major findings and conclusions; should be informative without reference to the text and should not contain any references or undefined abbreviations.

Keywords Up to eight pertinent words or phrases, in alphabetical order (these can repeat words in the title).

Structure Articles should generally follow the Introduction, Study Area (where appropriate), Methods, Results and Discussion format. Minimize use of other subheadings.

References Must be formatted in the journal's style (see details in the full Instructions for Contributors at <http://www.oryxthejournal.org>). Cite in the text as, for example, Hardcastle & Wilson (1996) or (Leadbeater, 1996). For three or more authors use the first author's surname followed by et al. Multiple references to be in chronological, then alphabetical, order. Reference list should be in alphabetical order, and article titles and the titles of serial publications to be given in full. If citations and bibliography are prepared using a bibliography manager any field codes, tags or similar must be removed.

Biographical sketches The research interests of all authors (<150 words total), over and above what is obvious from the subject of the manuscript and the authors' affiliations.

Tables Each on a separate page, with captions that are comprehensible without reference to the text.

Figures & Plates See the *Guidelines for the preparation of Figures and Plates* at <http://www.oryxthejournal.org>. Captions should be comprehensible without reference to the text

Appendices For mathematical or statistical models, lengthy tables, and questionnaires. May be published online-only, depending on length. Online-only appendices can also include Figures and Plates, and these can be in colour.

Abbreviations Minimize use, and provide full expansion of any at first mention in the text.

Symbols, units & currencies Use SI units (International System of Units, <http://www.bipm.org/en/si/>) and ISO 4217 currency codes (http://www.iso.org/iso/support/faqs/faqs_widely_used_standards/widely_used_standards_other/currency_codes/currency_codes_list-1.htm).

Nomenclature Where necessary provide the basis used for nomenclature of taxa. The first time a species is mentioned its scientific name should follow without intervening punctuation, thus African elephant *Loxodonta africana*. English names should be in lower case throughout except when they incorporate a proper name.

Offprints, page charges & colour figures Contributors receive a PDF file of their article, and may purchase offprints. No page charges are levied. Colour Figures can be published but only at the author's expense.

Copyright Authors will be asked, upon acceptance of an article, to transfer copyright to Fauna & Flora International.

Review Manuscripts are subject to rigorous peer review. Contributors may suggest appropriate reviewers. For manuscripts with a substantial statistical content, one of the reviewers will be a statistician. The main criteria for acceptance are originality, scientific rigour, an appropriately broad context, relevance to the readership and acceptability of style. We receive more submissions than we are able to publish and the final authority in all matters relating to publication lies with the Editor.

Proofs Sent to authors as a PDF file. Corrected proofs must be returned to the Editor within 3 days of receipt; minor corrections can be communicated by e-mail.

The Editor welcomes contributions to the other sections of the journal (deadlines for the January, April, July and October issues are 1 October, 1 January, 1 April and 1 July, respectively), by e-mail to oryx@fauna-flora.org (see <http://www.oryxthejournal.org> for further advice).

Letters Substantial and informative contributions (<700 words) in response to material published in the journal.

Briefly News (<6 months old) of general conservation interest based on authoritative published sources (<150 words), including reputable web sites.

Conservation news Major recent developments (<6 months old) in conservation or important announcements (<700 words), other than from published sources.

Grants & Opportunities, Meetings and Publications Availability of grants or funding opportunities, meeting announcements and book reviews, respectively. Authors and publishers are invited to send publications to the Editor for potential review.

The full *Instructions for Contributors* (including the *Guidelines for preparation of Figures & Plates* and the *Code of Conduct for authors contributing articles*) are available at <http://www.oryxthejournal.org> or from the Editor, *Oryx*—*The International Journal of Conservation*, Fauna & Flora International, 4th Floor, Jupiter House, Station Road, Cambridge, CB1 2JD, UK; E-mail oryx@fauna-flora.org; Tel. +44 (0)1223 571000; Fax +44 (0)1223 461481.

Oryx is covered by *Biological Abstracts*, *BIOBASE/Current Awareness in Biological Sciences*, *Current Contents Agriculture, Biology and Environmental Science*, *Science Citation Index*, *SciSearch*, *Research Alert* and *Ecology Abstracts*.

- Cover* The Socotra archipelago has outstanding endemic biodiversity, typified by the economically important dragon blood tree *Dracaena cinnabari*. Although inhabited for 6 millennia Socotra only began to open up to the outside world in 1990. With conservation interventions starting prior to major developments, and building on centuries-old low-intensity resource management, Socotra has been in a unique position to practise pre-emptive conservation. For further details see pp. 401-410. (Photograph © Neil Lucas/NaturePL.com)
