

SUBJECT INDEX

- accelerated lambda iteration, 81
- accretion, 393, 447
- accretion disk, 403, 537
- alkali metals, 505
- amorphous ice, 293
- asteroids, 527
- asymptotic giant branch (AGB) star,
365, 375, 435
- bipolar outflow, 203, 365
- bow-shock, 113
- branching ratios, 265
- brown dwarfs, 1, 505
- Ca-Al inclusions, 515
- carbon chains, 273
- carbon clusters, 251
- carbon enrichment, 483
- carbon rings, 273
- carbonaceous material, 537
- catalysis, 537
- champagne flow, 113
- chemical composition, 317
- chemical desorption, 293
- chemical evolution, 51, 283
- chemical fractionation, 527
- chondrites, 515
- chondrules, 515
- circumstellar disk, 113, 213, 223, 393,
403, 415, 549
- circumstellar dust, 435, 527
- cloud formation, 491
- C/O ratio, 161
- collapse, 15, 61, 125
- collision cross sections, 81
- collisional rates, 303
- coma, 447, 471
- comet, 1, 425, 435, 447, 461, 471,
483, 527, 549
- cometary dust, 331
- cometary organic feature, 471
- continuum emission, 71
- cooling, 81
- cosmic ray, 41, 425
- cosmochemistry, 515
- CRESU, 237
- crossed beam experiments, 251
- crystalline silicates, 435
- cyanopolynes, 251
- dark cloud, 71, 251
- dense clouds, 135
- depletion, 15, 31, 41, 51, 61, 71, 97,
161, 415, 425, 471, 505
- desorption, 15, 71, 135, 147, 283
- diffuse cloud, 31, 549
- diffuse interstellar bands, 343, 349
- diffusion, 41
- dissociative recombination, 265
- dust, 147, 293, 317, 331, 343, 349,
393, 515
- dust models, 317
- dynamical cycling, 161
- dynamical infall, 61
- early Universe, 1
- electron abundance, 41
- electron attachment, 237
- electron spin resonance, 283
- elemental abundances, 15, 491
- erosion, 331
- Fischer-Tropsch, 537
- fluorescence, 177, 191, 461, 471
- formation pumping, 293
- galactic nuclei, 349
- gas coolants, 161
- gas-grain chemistry, 135, 537
- gas-grain interaction, 51, 303, 425,
549
- gas-phase chemistry, 1, 31, 51, 71,
203, 251, 265, 303, 365, 447,
549
- gas-phase kinetics, 303
- Giant Planets, 491, 505
- grain chemistry, 1, 147, 283
- grain surface, 15, 51, 71, 293, 537
- grain-grain collision, 331
- H₂ formation, 191
- Herbig Ae/Be stars, 349, 435
- HH objects, 203
- high-mass star formation, 97
- HII regions, 349
- hot core, 97, 125, 147, 251, 447
- hydrocarbons, 537
- hydrogenation, 283
- ice, 97, 135, 435
- icy mantles, 15, 293, 331, 425, 483
- infrared spectroscopy, 349
- interplanetary dust particle IDP, 527
- interstellar absorption features, 317

- interstellar emission features, 317
ionization, 51
ion-molecule reactions, 237, 283, 365, 425
isotopes, 447, 515
isotopic fractionation, 447
isotopic ratios, 483, 491
jets, 203, 213
L dwarfs, 505
laboratory data, 237
large molecules, 343
late-type stars, 549
low-mass stars, 51, 71
maser, 113, 223
mass loss, 365
meteorite, 515, 527, 537, 549
meteorology, 491
millimeter interferometry, 415
molecular data bases, 303
molecular dissociation, 265
molecular excitation, 81
molecular ion, 265
molecular processes, 41, 293
molecular spectroscopy, 375
Monte Carlo methods, 81, 147
neutral neutral reactions, 237, 251
non-thermal collisions, 191
nucleosynthesis, 515
nucleus, 447
Oort cloud, 461, 483
optical spectroscopy, 273
organic refractory, 331
ortho-para ratio, 81, 177
outflow, 97, 113, 125, 191, 213, 549
oxygen chemistry, 161
oxygen reservoirs, 161
PAH, 303, 331, 349
PDR, 1, 97, 177, 191, 549
photochemistry, 147
photoevaporation, 403
planet atmosphere, 483
planet formation, 403
planetary nebulae, 349, 365, 549
planetary systems, 393
polarization, 331
post-AGB objects, 349, 435
pre-protostellar envelopes, 61
pre-stellar cores, 549
proplyds, 403
protoplanetary disk, 425, 303, 537
protostar, 113, 135, 203, 393
protostellar envelopes, 61
prot-solar nebula, 471
radiative transfer, 81, 375
radicals, 251
rate coefficients, 147, 237, 303
reaction barrier, 251
reaction kinetics, 237
reflection nebulae, 213
refractory, 483, 527
rotational spectroscopy, 273
shock chemistry, 203, 365
shocks, 71, 113, 177, 191, 203, 213, 331, 393, 447, 549
size distribution, 317
snow-line, 483
solar nebular, 447, 483, 515, 537
solar system, 483, 527, 549
solid-state chemistry, 303
sputtering, 15
star formation, 1, 61, 125, 213, 223, 403, 415, 549
stellar nucleosynthesis, 527
stellar wind, 113, 203, 365, 403
sticking, 51
storage rings, 265
sublimation, 51, 71, 135, 203, 393, 447, 483
substellar-mass objects, 505
surface chemistry, 135
surface reaction, 15, 97, 537
T dwarfs, 505
T Tauri stars, 393, 415, 537
time-dependent models, 51, 537
translucent cloud, 31, 549
UC HII, 113, 125, 223
UIR bands, 343, 349
ultra-high resolution spectroscopy, 343
UV pumping, 177, 191
volatiles, 331, 447, 461, 471, 483, 515, 527, 537
X-ray dominated region, XDR, 1, 177
X-rays, 425
young stellar object, 71, 213, 393, 97, 113
