**THE NEW B. W. & CO.**  
**POWDER INSUFFLATOR.**  
 (PATENT.)

**T**HIS new instrument presents conspicuous advantages over all the old forms. It is neat, light, highly finished, and altogether the most satisfactory form yet offered for the application of dry powders by insufflation to the nasal and oral mucous surfaces, and to sores, abscesses, &c., on the outer skin.

The advantage of having interchangeable cylinders to hold different powders is one which will be greatly appreciated in practice. The delay in emptying and refilling old-form reservoirs—not to speak of the great difficulty, frequently met with, in dispelling the unpleasant odour of a preceding insufflation (*ex. grat.* Iodoform)—was an objection levelled at insufflators of an earlier type.

The exchange of one powder for another (such as is often desirable either in the same or in a different case) is the work of a moment, and there is not the slightest risk of the character of one insufflation being affected by that of another.

It is therefore recommended that practitioners should provide themselves

with at least **TWO EXTRA** cylinders, in order that they may have more than one formula for insufflation available for instant use.

As will be seen from the sketch, the method of handling the insufflator is natural and easy, so that the operator is enabled both to hold the instrument and to bring about delivery of the powder with one hand, thus leaving the other hand free—a very appreciable advantage. Again, each instrument is provided with two forms of delivery tube (one straight and the other curved), which are easily and quickly exchangeable. A very effective attachment for depressing the tongue completes the instrument. It is to be noted that the tongue depressor, as designed for use in connection with this insufflator is of a unique pattern and easily detachable.

In accordance with a suggestion from Dr. Brownlow Martin (who speaks highly of the new instrument in his recent work, "Diphtheria, and its Treatment by Magnesium Sulphite"), we have introduced an improved tube, having a furcate end, the advantage of which will be at once obvious to medical practitioners, the insufflation being delivered in two nebulae proceeding at an acute angle.

The B. W. & Co. Powder Insufflator, with One Cylinder	...	...	10/-
Tongue Depressor for same	...	...	2/6
Extra Powder Cylinders, each	...	...	2/-
Case to contain Three Powder Cylinders	...	...	1/6
The B. W. & Co. Furcate Throat Tube	...	...	2/-

*A Leaflet bearing upon the new Insufflator, with formulæ for insufflations, may be had free on request.*
