

JOURNAL OF DAIRY RESEARCH

The proprietors beg to announce that, owing to increasing costs, they have been reluctantly compelled to raise the subscription price per volume to 80s. 0*d.* net (in U.S.A. \$13.50) post free: single Parts 30s. 0*d.* net each (in U.S.A. \$5.00) postage extra. The new prices will begin with Volume 31 (1964).

Orders should be placed with your bookseller or agent or alternatively with the Cambridge University Press, 200 Euston Road, London, N.W. 1.

Orders and enquiries from subscribers in the U.S.A. should be addressed to Cambridge University Press, American Branch, 32 East 57th Street, New York 22, N.Y.

If you have already placed your order for Volume 31, please confirm it at the increased price. The confirmation should be given to your bookseller or agent if the original order has been arranged by that method, or to the publishers if ordered direct.

Orders sent direct to the publishers should be accompanied by a remittance.

DIRECTIONS TO CONTRIBUTORS

GENERAL. The onus of preparing a paper in a form suitable for publication in the *Journal of Dairy Research* lies in the first place with the author. In their own interests authors are strongly advised to follow these directions carefully and to consult a current issue for guidance on details of layout and use of headings.

Typescripts may be sent to the Editors at any time, and submission of a paper will be held to imply that it reports unpublished original work which is not under consideration for publication elsewhere.

FORM OF PAPERS. Papers should be typed with double spacing, and the title followed by the names and initials of the authors, women supplying one Christian name. The name and postal address of the laboratory must be stated.

Papers should be divided into the following parts in the order indicated: (a) Summary, brief and self-contained; (b) Introductory paragraphs, briefly explaining the object of the work but without giving an extensive account of the literature; (c) Experimental or Methods; (d) Results; (e) Discussion and Conclusions; (f) Acknowledgements without a heading; (g) References. Only with some exceptional types of material will headings different from (c), (d) and (e) be necessary.

The spelling adopted is that of the *Shorter Oxford English Dictionary*. Underlining should be used only to indicate italics. Every effort should be made to avoid the use of footnotes. Proper nouns, including trade names, should be given a capital initial letter.

TABLES. Each table should be numbered and should have a heading that enables its contents to be understood without reference to the text. Tables must be typed on separate sheets and their approximate positions indicated in the text.

ILLUSTRATIONS. Line drawings, which must be originals, should be numbered as Figures and photographs as Plates, in Arabic numerals. Drawings should be in indian ink, on Bristol board or cartridge paper. However, a technique which may be more convenient to authors is to use a double-sized piece of tracing paper, or translucent graph paper faintly lined in blue or grey, folded down the centre with the drawing on one half and the other acting as a flyleaf.

Attached to every figure and plate there should be a translucent flyleaf cover on the outside of which should be written legibly: (a) title of paper and name of author; (b) figure or plate number and explanatory legend; (c) the figures and lettering, which is intended to appear on the finished block, in the correct position relative to the drawing underneath. For each paper there should also be a separate typed sheet listing figure and plate numbers

with their legends, and the approximate position of illustrations should be indicated in the text.

As a rule the photographs and diagrams should be about twice the size of the finished block and not larger over-all than the sheets on which the paper itself is typed. For general guidance in preparing diagrams, it is suggested that for a figure measuring 9 in. \times 6 in. all lines, axes and curves, should have a thickness of 0.4 mm, thus ———. Graph symbols in order of preference should be \circ , \bullet , \triangle , \blacktriangle , \square , \blacksquare , \times , $+$, and for a 9 in. \times 6 in. graph the open circles should be $\frac{1}{2}$ in. in diameter. The open triangles should be large enough to contain circles of $\frac{3}{8}$ in. diameter and the open squares circles of $\frac{1}{4}$ in. diameter. The crosses should have lines $\frac{1}{8}$ in. long. The block symbols should be slightly smaller than the corresponding open symbols. Scale marks on the axes should be on the inner side of each axis and should be $\frac{1}{8}$ in. long.

REFERENCES. In the text references should be quoted by whichever of the following ways is appropriate: Arnold & Barnard (1900); Arnold & Barnard (1900a); Arnold & Barnard (1900a, b); (Arnold & Barnard, 1900). Where there are more than two authors all the surnames should be quoted at the first mention, but in subsequent citations only the first surname should be given thus, Brown *et al.* (1901). If there are six or more names, use *et al.* in first instance. Also, if the combinations of names are similar, repeat names each time, e.g. Brown, Smith & Allen (1954); Brown, Allen & Smith (1954).

References should be listed alphabetically at the end of the paper, title of journals being abbreviated as in the *World List of Scientific Periodicals*. Authors' initials should be included, and each reference should be punctuated in the typescript thus: Arnold, T. B., Barnard, R. N. & Compound, P. J. (1900). *J. Dairy Res.* 18, 158. References to books should include name of author, year of publication, title, town of publication and name of publisher in that order, thus, Arnold, T. B. (1900). *Dairying*. London: Brown and Chester.

It is the duty of the author to check all references and to ensure that the correct abbreviations are used.

SYMBOLS AND ABBREVIATIONS. The symbols and abbreviations used are those of British Standard 1991: Part 1: 1954, *Letter Symbols, Signs and Abbreviations*.

DESCRIPTIONS OF SOLUTIONS. Normality and molarity should be indicated thus: N-HCl, 0.1 M-NaH₂PO₄. The term '%' means g/100 g solution. For ml/100 ml solution write '(v/v)' and for g/100 ml solution write '%(w/v)'.

REPRINTS. Order forms giving quotations for reprints are sent to authors with their proofs.

CONTENTS OF VOL. 30, No. 3

ORIGINAL ARTICLES	PAGE
Destruction of <i>Bacillus subtilis</i> spores with solutions of sodium hydroxide. R. L. WHITEHOUSE and L. F. L. CLEGG	315
Lactic casein whey powder in rations for pigs. I. The substitution of un- neutralized lactic casein whey powder for barley meal in an all-meal ration for growing pigs. A. C. DUNKIN	323
Lactic casein whey powder in rations for pigs. II. A comparison of un- neutralized and neutralized lactic casein whey powders with barley meal in all-meal rations for growing pigs. A. C. DUNKIN	331
Fatty acid composition of sow's colostrum, milk and body fat as determined by gas-liquid chromatography. J. M. DEMAN and J. P. BOWLAND	339
Occurrence of variants sensitive to agglutinins and to lactoperoxidase in a lactenin-resistant strain of <i>Streptococcus lactis</i> . J. AUCLAIR and YVONNE VASSAL	345
Transduction in <i>Streptococcus lactis</i> . LOIS K. ALLEN, W. E. SANDINE and P. R. ELLIKER	351
The detection of volatile components of milk by gas-liquid chromatography and its possible application in assessing keeping quality and flavour. L. A. MABBITT and GILLIAN MCKINNON	359
The oxidative stability of butterfat extracted from Cheddar cheese. A. K. R. McDOWELL	369
The effect of preparative conditions on the composition of the κ -casein complex. R. D. HILL and RAIONE R. HANSEN	375
A simple method for detecting an early stage in coagulation of rennetted milk. G. W. SCOTT BLAIR and J. BURNETT	383
A comparison of hay and silage for milk production. J. C. MURDOCH and J. A. F. ROOK	391
The estimation of dissolved oxygen in anhydrous milk fat. A. K. R. McDOWELL	399
The effect of pre-partum feeding of heifers on milk composition. A. S. FOOT, C. LINE and S. J. ROWLAND	403
Determination of s.n.f. in milk and unsweetened condensed milk from re- fractive index measurements. J. D. S. GOULDEN	411
REVIEWS OF THE PROGRESS OF DAIRY SCIENCE. SECTION B. Cheese and butter starters. B. REITER and A. MØLLER-MADSEN	419
