JOURNAL OF PLASMA PHYSICS

https://doi.org/10.1017/S002237780000670X Published online by Cambridge University Press

JOURNAL OF PLASMA PHYSICS exists for the publication of experimental and theoretical research papers on plasma physics and its applications.

EDITOR

DR J. P. DOUGHERTY

Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge, England

ASSOCIATE EDITORS

PROF. D. BERSHADER

Department of Aeronautics and Astronautics, Stanford University, Stanford, California 94305, *U.S.A.*

PROF. F. D. KAHN

Department of Astronomy, University of Manchester, Manchester 13, *England*

PROF. W. B. THOMPSON

Department of Physics, University of California, La Jolla, California 92038, *U.S.A.*

Authors wishing to have papers published in the JOURNAL should communicate them to any one of the persons named above, choosing one in their own country where possible.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers.

Manuscripts should be typed in double spacing on one side of the paper only with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 15 in. by 24 in. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript. Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. Authors are entitled to receive 50 offprints of a paper in the JOURNAL free of charge, and additional offprints can be purchased if ordered in advance.

JOURNAL OF PLASMA PHYSICS is published once every two months in January, March, May, July, September and November, by Cambridge University Press P.O. Box 92, London NW1 2DB and 32 East 57th Street, New York, N.Y. 10022.

Three parts form a volume. The subscription price of a volume (which includes postage) is £12 net ($37.50 in the U.S.A.). Single parts cost £5 net ($15.50 in the U.S.A.) plus postage.

Copies of the journal for subscribers in the United States of America are sent by air to New York to arrive with minimum delay.

Second class postage paid at New York, N.Y.

CONTENTS TO VOLUME 7

PART 1 FEBRUARY 1972

Nonlinear electrostatic plasma waves. HANS SCHAMEL *page* 1

Interpretation of dispersion relations for bounded systems. T. D. ROGNLIEN and S. A. SELF 13

Nonlinear waves in a non-uniform plasma. R. J. GRIBBEN 49

Thermodynamics of the relaxation of a temperature anisotropy in a collisionless plasma. C. MONTES and J. PEYRAUD 67

Some strong effects due to weak coupling in an assembly of oscillators. J. PEYRAUD and N. PEYRAUD 81

Method of characteristics for supersonic flow of a guiding centre plasma. Y. C. WHANG 87

Cut-off criteria of electronic partition functions and transport properties of thermal plasmas. M. CAPITELLI 99

Kinetic theory of three-wave interaction in a magnetized plasma. L. STENFLO 107

Rayleigh–Taylor instability of a viscous Hall plasma with magnetic field. G. BHOWMIK 117

Magnetic structure of ionizing shock waves. Part 1. Skew shocks. B. P. LEONARD 133

Magnetic structure of ionizing shock waves. Part 2. Oblique shocks. B. P. LEONARD 157

Magnetic structure of ionizing shock waves. Part 3. Normal shock. B. P. LEONARD 177

REVIEWS

Laser Interaction and Related Plasma Phenomena. Proceedings of the First Workshop. Rensselaer Polytechnic Institute, Hartford Graduate Center, June 1969, edited by Helmut J. Schwartz and Heinrich Hora 187

Physics of Hot Plasmas, edited by B. J. Rye and J. C. Taylor 187

PART 2 APRIL 1972

Ordinary-mode electromagnetic instability for counter-streaming plasmas with anisotropic temperatures. J. D. GAFFEY, W. B. THOMPSON and C. S. LIU 189

Nonlinear interaction of resonant plasma oscillations. G. J. LEWAK and J. OGUNLANA 207

Interaction processes in a weakly turbulent Vlasov plasma. D. J. OLBERS 217

https://doi.org/10.1017/S002237780000670X Published online by Cambridge University Press

Diatomic gas–thermal radiation interaction. A model equation for the internal fluid. W. F. Phillips and V. S. Arpaci *page* 235

On the flute instability in a Q-machine. E. D'Ambrogio and A. Nocentini 247

Effects of parallel waves in homogeneous plasmas in uniform magnetic fields. Y. Soshkovich Salu 255

A Langrangian theory for nonlinear wavepackets in a collisionless plasma. R. L. Dewar 269

Dynamic shielding effects in partially ionized gases. H. Hahn, E. A. Mason, E. J. Miller and S. I. Sandler 285

Numerical studies of magnetic field annihilation. J. C. Stevenson 293

On the derivation of the quasilinear equations. J. Fukai and E. G. Harris 313

On some solutions representing a dipole field immersed in an infinite plasma. C. Sozou 321

Nonlinear motions and trapping of particles in a quasi monochromatic wave. R. Klíma 329

An improved hierarchy for turbulent magnetized plasma. Part 1. Theory. E. J. Linnebur and T. Kammash 337

An improved hierarchy for turbulent magnetized plasma. Part 2. Application to resonant three-wave interactions. E. J. Linnebur and T. Kammash 363

Review

Kinetic Equations, edited by R. L. Liboff and N. Rostoker 373

Corrigendum 374

Part 3 June 1972

Effects of individual linear damping on nonlinear instability. J. Weiland 375

Sideband growth in nonlinear Landau wave-particle interaction. A. L. Brinca 385

Excitation of nanosecond waves on positive columns. B. A. Aničin, V. M. Babović and K. E. Lonngren 403

Longitudinal waves in a perpendicular collisionless shock. Part 4. Gradient B. S. P. Gary 417

Neoclassical diffusion of a finite-β, tokamak plasma. A. Nocentini 427

Production of intense ion beams by high-frequency electric fields. E. Sindoni and H. P. Eubank 435

Equilibrium configurations of Vlasov plasmas carrying a current component along an external magnetic field. J. R. Kan 445

Temporal electromagnetic echoes oblique to an external magnetic field. Y. Furutani 461

https://doi.org/10.1017/S002237780000670X Published online by Cambridge University Press

Nonlinear evolution of firehose-unstable Alfvén waves. K. Elsässer and H. Schamel *page* 475

High-β effect on the generalised ion Bernstein mode near the lower hybrid frequency. M. Nambu 503

A boundary problem in a plasma (oblique incidence). V. B. Karunarathne 513

Scattering of Langmuir waves produced by a beam with finite transverse dimensions. G. Berthomieu 523

Boundary conditions in the presence of Hall current of finite ion Larmor radius effects. R. J. Hosking and G. L. Kalra 545

The Rayleigh–Taylor problem with a vertical magnetic field, including the effects of Hall current and resistivity. G. G. Lister and R. J. Hosking 553

Index to Volume 563
