BIOPATCH Dressing is specifically designed to inhibit bacterial growth around all percutaneous devices, including catheters and orthopedic pins.

**Powerful protection.
Powerful proof.**

- BIOPATCH Dressing provides protection against a broad spectrum of bacteria including resistant strains MRSA and VRE as well as *Candida albicans*.
- In a controlled, randomized trial, the use of BIOPATCH Dressing resulted in a reduction in the incidence of CRBSI and local infections as compared with standard care.¹

- Rapid activity against gram-positive and gram-negative bacteria
- Persistent antimicrobial activity – prevents regrowth of microorganisms on the skin for at least 48 hours

- Unlike povidone-iodine, chlorhexidine (CHG) remains active in the presence of blood, serum, and other protein-rich biomaterials¹
- CHG has demonstrated a 50% reduction in the incidence of catheter-related bloodstream infections compared to povidone iodine¹
