

## SUBSCRIPTION RATES

Subscription rates (post free) for volume 35 (1998) of the *Journal of Applied Probability* are as follows:

US\$216.00; \$A279.00; £133.50 for libraries and institutions;

US\$72.00; \$A93.00; £44.50 for individuals belonging to a recognised scientific society.

Members of the London Mathematical Society should apply direct to the Secretary of the Society for copies of the *Journal*.

Please send all enquiries to: Applied Probability, School of Mathematics and Statistics, The University, Sheffield S3 7RH, UK.

We can provide back issue prices on application. Cheques, money orders, etc. should be made out to APPLIED PROBABILITY. Payment is accepted in US, UK or Australian currency or by VISA or Mastercard (phone: +44 114 222 3922; fax: +44 114 272 9782).

## NOTES FOR CONTRIBUTORS

Papers published in the *Journal* are of two kinds:

(1) *research papers* not exceeding 20 printed pages;

(2) *short communications* of a few printed pages in the nature of notes or brief accounts of work in progress.

*Review papers*, *longer research papers* and *letters to the editor* are published in *Advances in Applied Probability*, a companion journal. (Note: Letters relating specifically to papers which have appeared in the *Journal of Applied Probability* will continue to appear in the *Journal*.)

The editors may publish accepted papers in either journal, according to the space available, in order to meet the 15-month deadline in publication referred to below.

### Submission of papers

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Papers will not be reprinted without the written permission of the Trust. It is the policy not to accept for publication papers which cannot appear in print within 15 months of the date of receipt of the final version. Fifty reprints of each paper will be provided free; additional reprints are available at cost.

Papers should be written in English or French; papers in other languages may be accepted by the editors, but will appear (subject to the author's agreement) in English or French translation. Please supply *three* double-spaced hard copies, at least one of which should be printed on one side of the paper only. The paper should include: (1) a short abstract of approximately 4–10 lines giving a non-mathematical description of the subject matter and results; (2) list of keywords detailing the contents for the purpose of computerised information retrieval; (3) primary and secondary classifications according to the 1991 Mathematics Subject Classification, to be found in the 1990 Annual Index of *Mathematical Reviews*.

Authors are advised to consult *The Author's Guide to the Applied Probability Journals* when preparing papers for submission. A copy of this guide may be obtained free of charge from the Applied Probability Office. An updated version of the guide, with LATEX style files, can be obtained in electronic form on <http://www.shef.ac.uk/~apt> or on PC-compatible disk from the Applied Probability Office.

For efficiency in processing, authors are requested to send all submissions to the Applied Probability Office in Sheffield, rather than to individual editors. The address for all submissions is:

**Executive Editor, Applied Probability, School of Mathematics and Statistics,  
The University, Sheffield S3 7RH, UK.**

## COPYRIGHT

The copyright of all published papers shall be vested in the Trust. When a paper is accepted for publication, the Trust requests the author(s) to sign a form assigning copyright to the Trust. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of \$00.70 per copy, plus .20 per page is paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021-9002/98 \$00.70+ .20.

*Research Papers*

- 1 GARETH O. ROBERTS, JEFFREY S. ROSENTHAL AND PETER O. SCHWARTZ. Convergence properties of perturbed Markov chains
- 12 T. N. SRIRAM. Asymptotic expansions for array branching processes with applications to bootstrapping
- 27 ALEXANDER KOLESNIK. The equations of Markovian random evolution on the line
- 36 RUDOLF GRÜBEL. Hoare's selection algorithm: a Markov chain approach
- 46 MOHAMED BENTARZI AND MARC HALLIN. Spectral factorization of periodically correlated MA(1) processes
- 55 FRANCK VERMET. Phase transition and law of large numbers for a non-symmetric one-dimensional random walk with self-interactions
- 64 ZHAO-GUO CHEN AND OLIVER D. ANDERSON. Increment-vector methodology: transforming non-stationary series to stationary series
- 78 BENT JØRGENSEN AND PETER XUE-KUN SONG. Stationary time series models with exponential dispersion model margins
- 93 MARCO SCARSINI. Multivariate convex orderings, dependence, and stochastic equality
- 104 M. XIE AND C. D. LAI. On reliability bounds via conditional inequalities
- 115 A. SCHÖTTL. Optimal stopping of a risk reserve process with interest and cost rates
- 124 STEVEN T. GARREN AND DONALD ST. P. RICHARDS. General conditions for comparing the reliability functions of systems of components sharing a common environment
- 136 MOSHE HAVIV AND MARTIN L. PUTERMAN. Bias optimality in controlled queueing systems
- 151 XIULI CHAO AND SHAOHUI ZHENG. A result on networks of queues with customer coalescence and state-dependent signaling
- 165 FABRICE GUILLEMIN AND DIDIER PINCHON. Continued fraction analysis of the duration of an excursion in an  $M/M/\infty$  system
- 184 SAMULI AALTO. Characterization of the output rate process for a Markovian storage model

*Short Communications*

- 200 MARTIN BENDA. A central limit theorem for contractive stochastic dynamical systems
- 206 LAJOS HORVÁTH. Diffusion approximation for random walks on anisotropic lattices
- 213 RAISA E. FELDMAN AND SRIKANTH K. IYER. Non-Gaussian density processes arising from non-Poisson systems of independent Brownian motions
- 221 J. M. FERNANDEZ-PONCE, S. C. KOCHAR AND J. MUÑOZ-PEREZ. Partial orderings of distributions based on right-spread functions
- 229 MARKUS ROTERS. Optimal stopping in a dice game
- 236 JIAN-LUN XU. Characterizations of the exponential distribution via the blocking time in a queueing system with an unreliable server
- 240 NEIL O'CONNELL. Large deviations for queue lengths at a multi-buffered resource
- 246 S. A. BEREZNER, A. E. KRZESINSKI AND P. G. TAYLOR. On the inverse of Erlang's function
- 253 Correction
