The Mechanistic Conception of Life. Biological Essays
by JACQUES LOEB, Head of the Department of Experimental Biology,
Rockefeller Institute for Medical Research.

238 pages. 12mo. Cloth. 6s. net.

The achievements of Professor Jacques Loeb in the field of experimental biology have made him so widely known as to ensure any book of his a large circle of readers. His experimental work at the universities of Chicago and California, as well as in his present position, gives this volume an especial significance.

In this his latest work Professor Loeb presents many of the current problems in biology, and discusses the question whether the phenomena of life can be explained by physical and chemical laws. He finds it possible to control by physical or chemical means not merely the processes of reproduction, but also the conduct of animals with reference to environment.

"The profession, as well as everyone interested in biology, will thank the author and the publishers for collecting these essays and placing them before the reading public."—*The New York Medical Journal*

"All eager to know more of the origin of life will find no modern book of its size nearly so instructive or inspiring."—*Johns Hopkins Hospital Bulletin*

Heredity and Eugenics. By JOHN M. COULTER, WILLIAM
E. CASTLE, EDWARD M. EAST, WILLIAM L. TOWER and CHARLES
B. DAVENPORT.

312 pages. 8vo. Cloth. 10s. net.

Leading investigators, representing the University of Chicago, Harvard University, and the Carnegie Institution of Washington, have contributed to this work, in which great care has been taken by each contributor to make clear to the general reader the present position of evolution, experimental results in heredity in connection with both plants and animals, the enormous value of the practical application of these laws in breeding, and human eugenics. The volume is profusely illustrated.

"Those who are desirous of arriving at an estimate of the present state of knowledge in all that concerns the science of genetics, the nature of the experimental work now being done in its various departments,.....and the prospects, immediate or remote, of important practical applications, cannot do better than study *Heredity and Eugenics*."—*British Medical Journal*

"*Heredity and Eugenics* may be heartily recommended to readers seeking, as beginners, to get in touch with the discussion of these subjects.....In most of the lectures there is an admirable reserve, not to say scepticism, in the treatment of large questions which the public is often misled to regard as already and finally settled."—*The Nation*, New York

The publications of the University of Chicago Press, a full catalogue of which will be sent on application, are sold in the United Kingdom and the British Colonies by THE CAMBRIDGE UNIVERSITY PRESS, Fetter Lane, London, E.C.
