

Journal of the Marine Biological Association

Published for the Marine Biological Association of the United Kingdom

JMBA is an international journal with a worldwide distribution publishing original research on all aspects of marine biology. It includes current international research developments and features much of the pioneering work taking place today on major issues concerning marine organisms and their environment. Subjects covered include: ecological surveys and population studies of oceanic, coastal and shore communities; physiology and experimental biology; taxonomy, morphology and life history of marine animals and plants; and chemical and physical oceanographic work which relates closely to the biological environment.

New from Cambridge

Animal Conservation

Published for The Zoological Society of London

Cambridge University Press is pleased to announce the launch of a new journal for 1998 which is published on behalf of The Zoological Society of London. *Animal Conservation* brings together exciting new research into the factors which influence the conservation of animal species and their habitats. Amongst the subjects covered by the journal are ecology, behavioural ecology and wildlife biology, wildlife disease and epidemiology, and population biology.

Animal Conservation provides a unique and important forum for rapid publication of novel, peer reviewed scientific studies, and is essential reading not only for conservation biologists working in a range of related fields, but also for professionals working in government and non-governmental bodies, policy makers and students.

Subscriptions

Volume 1 in 1998: February, May, August and November
£78 for institutions; £39 for individuals.
Free to institutional subscribers to *Journal of Zoology* during 1998 only. Special arrangements exist for members of The Zoological Society of London.

Environmental Conservation

Published for the Foundation for Environmental Conservation

Environmental Conservation is one of the longest-standing and most authoritative of the journals dealing comprehensively with the science underpinning environmental concerns at a global level. Uniquely, it aims to cover all aspects of the field, including issues in human institutions, industry, pollution and habitat degradation, energy and materials sources, terrestrial biomes and cultivation, atmospheric and oceanic processes, and coastal zone management, while maintaining a foundation in underlying research. The Editor is supported by an international team of Associate Editors, who are active workers in their fields, and a group of Advisory Editors, who are acknowledged as eminent long-term contributors to environmental science. Published quarterly, the journal includes comment, subject reviews, standard and short research papers, book reviews and meeting reports on all relevant aspects of the broad subject involved. This journal is essential reading for all environmentalists, conservationists and scientists wishing to keep abreast of current developments in environmental science.

Instructions for Contributors

Bird Conservation International publishes papers and communications on subjects relevant to the conservation of birds, with a general preference for those addressing international or high national priorities.

Submission of manuscripts. Papers may be submitted to the Editor, Dr Chris Mason, *Bird Conservation International*, Department of Biological Sciences, John Tabor Laboratories, University of Essex, Wivenhoe Park, Colchester CO4 3SQ, UK.

Three copies should be sent accompanied by the author's address, telephone and fax number, and, if possible, an electronic mailing address. Name(s) and postal address(es) should appear at the end of the article, in the format adopted. Submission of a paper is taken to imply that it is unpublished and it is not being considered for publication elsewhere.

Papers should be concise and factual, taking proper account of previous relevant literature; opinions expressed should be based on adequate evidence. Whilst there is no formal restriction on length, authors planning to submit a paper which is likely to exceed 15 printed pages should discuss the work with the Editor at an early stage in its preparation.

Titles of papers must be accurate and concise, and (for the benefit of abstraction services) include any relevant scientific (taxonomic) name; a running head is needed (the editors will provide this if the authors do not). A full-length paper must include a proper summary.

Papers should be typewritten on one side of the paper only, using double spacing throughout, with positions of figures and tables indicated in the margin. The paper should also be provided on **disk**, preferably in Word for Windows 6, giving details of the word processing software used (Microsoft Word, Word or WordPerfect). However, the publisher reserves the right to typeset material by conventional means if an author's disk proves unsatisfactory.

Conventions. Whenever possible, authors should consult an issue of *BCI* for style and layout. Spelling generally follows *The shorter Oxford English dictionary*, supplemented by various standard references such as 'Topography' in *A dictionary of birds* (1985) and the most recent edition of *The Times atlas of the world*. Localities with well-known other spellings or older names should have these placed in parentheses after first mention, while localities too small to be in the *Times atlas* should be given their precise geographical coordinates (preferably with some evidence of source).

Modern authorities should be followed for both English and scientific names of birds, with explanations of any deviation. On first mention of a bird both English and scientific name should be given, thereafter only one, preferably the English. Scientific trinomials need be used only if subspecific nomenclature is relevant to the topic under discussion. These recommendations also apply for any other animal or plant species mentioned.

Metric units and their international symbols should be used (other systems of measurement can be added in parentheses), with temperatures in the Centigrade (Celsius) scale. Numbers one to nine are written in full except when linked with a measurement abbreviation or higher number, thus 'five birds' but '5 km' and '5–12 birds'; numerals are used for all numbers above ten, four-figure numbers and above using the comma thus: '1,234', '12,345'. Details of experimental technique, extensive tabulations of results, etc., are best presented as appendices. Dates should be written 1 January 1985, times of day as 08h30, 17h55 (24-hour clock), etc. When citing a conversation ('verbally') or letter ('*in litt.*'), the contact's name *and initials* should be included, preferably with the year of communication.

Figures should be numbered consecutively as they appear in the text. Mark each figure with the first author's name and figure number on the reverse, and indicate its orientation. Authors should submit three copies of each illustration. Wherever possible they will be reproduced with the author's original lettering. Maps are best marked with a scale and north arrow, and drawn very neatly. Good photographs are also considered. Captions for all illustrations should be listed on a separate sheet.

Tables with concise headings should be typed on separate sheets and numbered consecutively. Each table must have a text reference, in the form 'Table 1' etc. Indicate where tables are to be placed by means of a note in the margin.

References in the text should not use ampersand or comma before the date, and should be chronologically listed, alphabetically if in the same year. Publications by the same authors in the same year may be distinguished by a, b, etc., after the date. Full references must be listed alphabetically at the end in conformity with the existing system of presentation (which should be carefully checked before submission).

Proofs. The corresponding author will receive page proofs for checking which they are required to return within three days of receipt. Textual changes in proof cannot normally be countenanced and the publisher reserves the right to charge authors for excessive correction of non-typographical errors.

Offprints. Twenty-five offprints of each article will be provided free of charge. These will be sent to the first author unless otherwise requested; additional copies may be purchased if ordered at proof stage on the form provided.

Copyright. Authors of articles published in the journal assign copyright to BirdLife International (with certain rights reserved) and a copyright assignment form will be sent to the author for signature on acceptance of a paper.
