

Instructions for contributors

Robotica aims to be an outlet for publication of original papers of the highest quality in the field of Robotics and closely related areas. This includes: novel robotic mechanism and actuator design; robot kinematics, dynamics and control; computer vision; sensor fusion; teleoperation and haptic interfaces; robot motion planning; and artificial intelligence. In addition, papers that apply techniques from Robotics to other fields are also welcome. Examples include dynamics and control models applied to biological systems, the description of implementations of robots in factories, service and agricultural settings, and general mechatronic design. Works may be theoretical, computational or experimental, or some combination. Both short papers (rapid communications), and longer archival papers are welcome. Proposals for special issues on topics of current interest are welcome, and can be submitted via email to the editor.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Robotica* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editor's decision on the suitability of a manuscript for publication is final. Manuscripts, whether accepted or rejected, will not be returned to authors.

Submission of manuscripts

Manuscripts for consideration by *Robotica* should be submitted electronically, using the Manuscript Central System, via <http://mc.manuscriptcentral.com/cup/robotica>. This system will allow authors to benefit from faster review and earlier, online publication. The system will accept PDF files; most other file types will be automatically converted directly into PDF. Source files are required for any paper accepted for publication. Authors who are unable to submit online should contact the Editorial Office (robotica@cambridge.org) for assistance.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

Layout of manuscripts

Text should be double spaced throughout, on one side of the paper, allowing generous margins on all sides of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 100 words and should end with a brief concluding section. The title and section headings should be concise and descriptive. All measurements should be given in SI units. On acceptance of a manuscript, authors are asked to send the electronic source file of the final version together with a PDF copy produced using the same file. The publisher reserves the right to typeset material by conventional means if an author's file proves unsatisfactory.

Illustrations

Figures should be composed to occupy a single column (80mm) or two columns (166mm) after reduction. The preferred format for figure files is .eps or .tiff at resolution 1200 dpi for lines, 600 dpi for greyscale and 300 dpi for colour (which preferably should also be in CMYK – cyan magenta yellow black – format). However,

most standard image formats such as pct, ppm, png, psd, Word, ppt, CorelDraw, ChemDraw, AutoCAD can also be used, but not customized output of software not designed for publishing purposes such as Matlab, nor PDF. Figures to be printed in black and white must be submitted as black and white files.

Figures should be numbered consecutively, with Arabic numerals, have descriptive captions, and be mentioned in the text. A list of captions should be attached separately, and as far as possible, information relating to a figure should be placed in the caption rather than on the figure. Each figure should be clearly numbered. Photographs should be the same size as they will appear in the journal and should be selected to fit neatly into one column (80 mm) or two columns (166 mm). Photographs should be clearly identified and numbered as for line drawings.

Tables

Tables should be presented on separate sheets. A descriptive title should be given to each table. If possible, very wide tables should be avoided. Tables should be numbered consecutively in Roman numerals. Exceptionally lengthy tables may be summarized for publication with a note that fuller details can be obtained from the authors.

Equations

Mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. All mathematical symbols will be set in italics unless otherwise indicated: symbols or letters to be set in Roman (upright) type should be marked clearly.

References

In the text, references are indicated by superior Arabic numbers (without brackets), and should be confined to published work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names: cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of Chemical Abstracts or Physical Abstracts, and be underlined for italics:

P.W. Anderson, "More is different" *Science* **177**, 393-399 (1972);
C.V. Negoita, *Fuzzy Systems* (Abacus Press. Tunbridge Wells, UK, 1980).

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

Proof Reading

The corresponding author will receive PDF copies of page proofs for final proofreading. Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. Authors are requested to return proofs within 48 hours by airmail. No page charge is made.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

ROBOTICA

Volume 41 Part 4 April 2023

An improved Kalman particle swarm optimization for modeling and optimizing of boiler combustion characteristics Jing Liang, Hao Guo, Ke Chen, Kunjie Yu, Caitong Yue and Xia Li	1087
A one-DOF compliant gripper mechanism with four identical twofold-symmetric Bricard linkages Kunjing Chen, Tianxiang Lai, Fufu Yang, Jun Zhang and Ligang Yao	1098
Discrete soft actor-critic with auto-encoder on vascular robotic system Hao Li, Xiao-Hu Zhou, Xiao-Liang Xie, Shi-Qi Liu, Mei-Jiang Gui, Tian-Yu Xiang, Jin-Li Wang and Zeng-Guang Hou	1115
Rotorcraft aerial vehicle's contact-based landing and vision-based localization research Xiangdong Meng, Haoyang Xi, Jinghe Wei, Yuqing He, Jianda Han and Aiguo Song	1127
Autonomous control design of an unmanned aerial manipulator for contact inspection Junhao Zeng, Hang Zhong, Yaonan Wang, Shuangwen Fan and Hui Zhang	1145
Robust PID optimal tuning of a Delta parallel robot based on a hybrid optimization algorithm of particle swarm optimization and differential evolution Yong-Ju Pak, Yong-Su Kong and Jin-Song Ri	1159
Motion analysis and stability optimization for metamorphic robot reconfiguration Jun Liu, Xiaodong Ruan, Mingming Lu, Huajian Weng, Di Wu and Minyi Zheng	1179
Mechanical responses of soft magnetic robots with various geometric shapes: locomotion and deformation Yuchen Jin, Shiyang Liu, Jing Li, Gongqi Cao and Jianlin Liu	1203
A feedforward compensation approach for cable-driven musculoskeletal systems Yerui Fan, Jianbo Yuan, Yaxiong Wu and Hong Qiao	1221
Neural-learning-enhanced Cartesian Admittance control of robot with moving RCM constraints Hang Su, Yunus Schmirander, Sarah Elena Valderrama-Hincapié, Wen Qi, Salih Ertug Ovur and Juan Sandoval	1231
Multi-UAV path planning based on IB-ABC with restricted planned arrival sequence Li Tan, Jiaqi Shi, Jing Gao, Haoyu Wang, Hongtao Zhang and Yu Zhang	1244
A high-accuracy hollowness inspection system with sensor fusion of ultra-wide-band radar and depth camera Haoran Kang, Wentao Zhang, Yangtao Ge, Haiou Liao, Bangzhen Huang, Jing Wu, Rui-Jun Yan and I-Ming Chen	1258
Development of a novel body weight support system for gait rehabilitation Lucas A. O. Rodrigues and Rogério S. Gonçalves	1275
Adaptive lead-through teaching control for spray-painting robot with closed control system Yajun Liu, Bin Zi, Zhengyu Wang, Sen Qian, Lei Zheng and Lijun Jiang	1295
Neighboring extremal nonlinear model predictive control of a rigid body on $SO(3)$ Shiva Bagherzadeh, Hossein Karimpour and Mehdi Keshmiri	1313
Measuring interaction forces in surgical telemanipulation using conventional instruments Max B. Schäfer, Anja M. Glöckner, Gerrit R. Friedrich, Johannes G. Meiringer and Peter P. Pott	1335
Nonlinear model identification and statistical verification using experimental data with a case study of the UR5 manipulator joint parameters Masoud Abedinifar, Seniz Ertugrul and Serdar Hakan Arguz	1348

Robotica now accepts submissions via Manuscript Central
