

NEW RMS HANDBOOK

Lectin Histochemistry

S.A. Brooks (Oxford Brookes University),
A.J.C. Leatham (University College London Medical School) and
U. Schumacher (University of Southampton)

A succinct and highly practical guide to lectin histochemistry. It is aimed at laboratory-based scientists with little or no experience of working with lectins. Paperback, 192 pages, 25 line illustrations, 19 half-tones, 2 color plates and 10 tables.

Available from Microscopy Today: Price \$40.00 plus \$5.00 S&H

Table of Contents

1 An Introduction to the Field

Definition
A brief history of lectinology
Nomenclature
Simple and complex sugars
Sugar specificity of lectins
Sources and occurrence
Detection
Lectin structure
Functions of lectins
What can lectins be used for?
Why use lectins?
References

2 Sources of Lectins and Other Reagents for Histochemistry

Isolation of lectins from plant material
Commercial sources of lectins and other reagents
How to make your own polyclonal antibodies against lectins
An alternative to using antibodies: labeled lectins

3 Lectin Histochemistry for Light Microscopy:

I. Principles, Sample Preparation and Choice of Label

Definition of lectin histochemistry
A philosophical point before starting
Basic requirements for successful lectin histochemistry

Preparation of specimens: cells and tissues
Labels for detection of lectin binding
Reference

4. Lectin Histochemistry for Light Microscopy

II. Methods for Visualization of Lectin Binding

General practical notes
Direct method
Simple indirect method
APAAP or PAP methods
Avidin-biotin methods
A word about kits
Controls
Some ideas on choice of lectins
Hazardous lectins
Which tissues to use
Footproof methods for the beginner
The way forward: characterization of complex carbohydrates
References

5. Electron Microscopic Methods for Demonstration of Lectin Binding Sites.

Introduction
Choice of label
Direct and indirect detection methods
Pre-embedding and post-embedding techniques
Methods for demonstration of lectin binding at the EM level
Controls
References

6. Analysis of Glycoproteins by Electrophoretic Techniques with Western Blotting using Lectins

Limitations of electrophoretic techniques
Sample preparation
Preliminary analysis of lectin binding by dot-blotting
Analysis of glycoproteins by SDS-PAGE and Western blotting using lectins
References

7. Interpretation and Analysis of Lectin Binding

Interpretation of lectin binding to tissue sections: simple and complex sugars
Lectin binding to a range of binding partners
Patterns of binding to cells and tissues
Recording staining results
Analysis of lectin binding partners
References

8. Applications and Usefulness of Lectin Binding Studies

Strategy for use of lectin histochemistry
Mapping lectin binding to normal tissues
Identification of cell lineage
Mapping lectin binding in disease
Other approaches
References

9. Histochemistry to Localize Endogenous Lectins

Introduction
Cellular functions of glycoconjugates
Endogenous lectins
Localization of endolectins by *in situ* hybridization
Localization of endolectins by conventional immunohistochemistry
Localization of endolectins through binding of labeled neoglycoproteins
References

Appendices

A: Recipes
B: Suppliers

ANYONE CAN SERVICE YOUR SEM, BUT...

NOBODY SERVICES TOPCON/ISI LIKE TOPCON.

At Topcon we are committed to providing the best possible service for Topcon/ISI SEM's. With our strong financial base and years of experience, we are able to offer our customers a wide variety of service options including:

- "FULL" Coverage Contracts
 - Competitive Pricing
 - Time and Materials Service
- Largest Stock of Topcon Factory Warranted Parts
- Nationwide Network of Highly Qualified Engineers

As a special bonus call Topcon at 800-874-4277 before July 31, 1997 and receive a service voucher worth \$500 off your next service call.

37 West Century Road • Paramus, New Jersey 07652
Phone: 800-874-4277 • Fax: 201-262-1504

NORAN/Tracor Northern EDS Repair

Factory and field trained personnel with over 35 years total experience, located in the Midwest, specializing in TN2000 and TN5500 repair, detector upgrades, data storage, imaging hardware and peripheral output devices - and used equipment resale.

Choose from a full maintenance or parts only contract, or on-demand service - at rates normally a fraction of others. Now accepting Visa, MC, AE and Purchasing cards.

“To see a World in a Grain of Sand”

(William Blake 1757-1827)

World leading imaging systems for microanalysis

Today, electron microscopes provide images with remarkably high resolution. But an electron micrograph only provides part of the information needed for a complete understanding of the sample. Maps of elemental distribution and crystal orientation provide a graphic and rapid insight into the nature of the specimen.

Oxford Instruments provides a complete range of analytical techniques to enhance your imaging capability:

- Autobeam - digital imaging with point & click analysis
- Cameo - chemistry and topography in a single image
- SpeedMap - the fastest X-ray mapping available
- ImQuant - complete image processing and analysis
- Facet Stereo - surface roughness measurement
- OpalMap - crystal orientation mapping
- Microspec - map with WD resolving power
- Link Tetra - backscattered electron imaging made easy

Crystal orientation map from interstitial free steel

Together with the Oxford Instruments global support organisation, our microanalysis systems ensure you really see the whole world of information in your samples.

The first choice in microanalysis
