

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editor, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used will be of great help to the editors.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}_{\mathcal{M}S}$ - $\mathcal{T}_{\mathcal{E}X}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{A}_{\mathcal{M}S}$ - $\mathcal{T}_{\mathcal{E}X}$. Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on a $5\frac{1}{4}$ IBM PC compatible diskette or via e-mail to ams@maths.uq.oz.au. [Typed manuscripts are, of course, still acceptable.]

Quantum double construction for graded Hopf algebras	353
M.D. Gould, R.B. Zhang and A.J. Bracken	
Some classes of sequential spaces	377
Sergey A. Svetlichny	
Gap Tauberian theorems	385
Jeff Connor	
Locally compactly Lipschitzian mappings in infinite dimensional programming	395
B.M. Glover	
On a weak* drop property	407
Warren B. Moors	
Twist orbits for non continuous maps of degree one	415
Francisco Esquembre	
Structure des cones normaux contenus dans un espace de Banach ou son dual II	427
Richard Becker	
Multipliers on spaces of functions on compact groups with p-summable Fourier transforms	435
Sanjiv Kumar Gupta, Shobha Madan and U.B. Tewari	
The approximate subdifferential of composite functions	443
A. Jourani and L. Thibault	
A decision problem for varieties of commutative semigroups	457
W.L. Cao	
Subdifferentials are locally maximal monotone	465
S. Simons	
On relations between Jacobians and resultants of polynomials in two variables	473
Takis Sakkalis	
A minimax inequality with applications to existence of equilibrium points	483
Kok-Keong Tan and Zian-Zhi Yuan	
Strictly real Banach algebras	505
John Boris Miller	

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Modelling host regulation of <i>Trichostrongylus colubriformis</i> a nematode parasite of sheep	521
Robert John Dobson	
Asymptotic representation of transient electromagnetic fields in geophysical prospecting	523
Rainer Ignetic	
Vacuum spacetimes with a spacelike Killing vector	525
Duong Phan
