## COVER

Auroral displays over the Antarctic plateau during the winter. Auroras are created when fast-moving, magnetic solar material strikes the magnetosphere producing a geomagnetic storm. Increasing interest is being shown by satellite manufacturers and insurance companies in modelling the interactions between the sun and the outer atmosphere to predict storms and limit damage to satellites. **Editorial Policy.** *Antarctic Science* provides a focus for many of the interdisciplinary interests that characterize Antarctic studies. The journal includes both synthesis and data papers, opinion papers, short notes on technical developments and field work, an editorial and book reviews. *Antarctic Science* is a journal that is interesting, original and topical yet rigorous in its treatment of primary scientific data. There is no maximum page length for scientific papers. Authors are required to follow the style set out in 'Instructions for Contributors' accessible either as a pdf at [cambridge.org/ans](http://cambridge.org/ans) or through <http://mc.manuscriptcentral.com/cup/antsci> where all manuscripts must be submitted.

**Ownership.** *Antarctic Science* is owned by the charitable company Antarctic Science Ltd (Directors: J.R. Dudeney, J.E. Francis, K. Hendry, T. Jickells, M.R.A. Thomson, P.A. Tyler, D.W.H.
