HARTVEIT, E. & HEGGELUND, P. (1992). The effect of contrast on the visual response of lagged and nonlagged cells in the cat lateral geniculate nucleus. *Visual Neuroscience* **9**, 515-525.

Page 522: Figure 8 was printed incorrectly. The correct version, with caption, appears below.

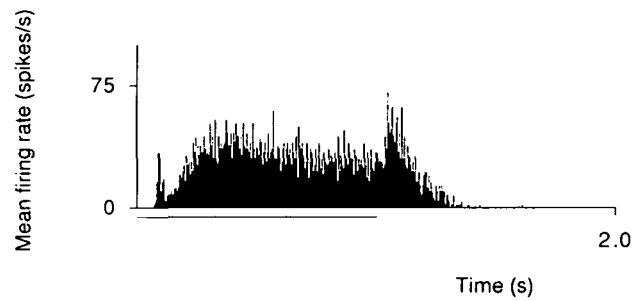

Fig. 8. Initial transient response component at high contrast for an ON-center lagged X cell. Stimulus contrast was 7.0. Time window = 1000 ms. The histogram was compiled from 100 stimulus presentations. Latency to half-rise, measured on the initial transient, was 88 ms.
