## INSTRUCTIONS TO CONTRIBUTORS

The *Journal of Helminthology* publishes papers on all aspects of animal parasitic helminths, particularly those of medical or veterinary importance, but only in exceptional circumstances will systematic or taxonomic studies be acceptable.

Manuscripts, which must be in English or French (with an English summary) should be accompanied by a letter signed by *all* the authors and should be addressed to:

The Editors, Journal of Helminthology,  
London School of Hygiene and Tropical Medicine,  
395A Hatfield Road,  
St Albans, Herts AL4 0XQ.  
England.

Three copies of a typescript, on size A4 paper with double spacing, should be submitted. Papers should be preceded by a short abstract and will normally have the following sections: brief Introduction; Materials and Methods; Results; Discussion; Acknowledgements; References. However, the form of the paper may vary, depending on its subject matter; recent past issues should be consulted for a suitable form. Research Notes should also be preceded by a brief abstract. Illustrations should be drawn in Indian ink, preferably not more than double the final size. Care should be taken that all illustrations fit into the format of the Journal. The maximum size an illustration will be printed is 12.0×20.0 cm. Where many separate drawings are made, some indication of how they may be grouped to make a corporate plate without undue wastage of space, should be indicated. Some indication of scale (preferably a scale bar) should normally be given on the figure. Photocopies of illustrations should be enclosed for refereeing purposes. Lettering and numbering, which must be of a high standard, should be added by the author, with due regard for subsequent reduction.

Photographs should be glossy prints of the same size as they are to appear in the Journal (maximum size 12.0×20.0 cm). Composite prints must be mounted and can have the separate photographs abutting; they will then have a separating line inserted by the printers. All figures and letters on photographs must be inserted by the author.

Information should not be repeated in the text and in tables or figures. The legends to tables and to figures should be sufficiently detailed for the information to be understood without reference to the text.

References should be given in alphabetical order with the full title of the journal. The following are examples:

ASHFORD, R. W. & BARNISH, G. (1989) *Strongyloides fuelleborni* and similar parasites in animals and man. In: *Strongyloidiasis: a major roundworm infection of man* (editor, D. I. Grove) pp. 271–286. Taylor & Francis: London.

GARSIDE, P. & BEHNKE, J. M. (1989) Primary infection of hamsters with *Ancylostoma ceylanicum*. *Parasitology*, **98**, 283–289.

# Contents

	Pages
The effect of praziquantel on the ultrastructure of <i>Schistosoma margrebowiei</i> . A. H. H. AWAD and A. J. PROBERT	79-88
Diagnostic Mr 31/32000 proteins <i>Schistosoma mansoni</i> (Sm31/32) and <i>S. haematobium</i> (Sh31/32): stability and reaction conditions for prospective field tests. M. A. IDRIS and A. RUPPEL	89-94
A study of an outbreak of schistosomiasis in two resettlement villages near Abeokuta, Ogun State, Nigeria. I. E. OFOEZIE, A. M. A. IMEVBORÉ, M. O. BALOGUN, O. O. OGUNKOYA and S. O. ASAOLU	95-101
Partial purification and characterization of a soluble acid phosphatase from the tapeworm, <i>Hymenolepis, diminuta</i> . M. J. BUMBULIS and P. W. PAPPAS	103-110
Studies on the chemical nature of the cyst wall of <i>Microphallus madrasensis</i> . P. RAMASAMY and S. L. PANICKER	111-119
Nonspecific immunomodulation influences resistance of mice to experimental infection with <i>Mesocestoides corti</i> and <i>Ascaris suum</i> . J. HERMANEK	121-132
<i>In vitro</i> effect of larval states of <i>Ascaris lumbricoides</i> on human blood clotting. N. MALLA, B. A. SOFI, N. K. GANGULY and R. C. MAHAJAN	133-140
Factors influencing the egg production of <i>Ascaris lumbricoides</i> : relationship to weight, length and diameter of worms. B. SINNIAM and K. SUBRAMANIAM	141-147
Molecular cloning of the cDNA encoding an immunodominant antigen of <i>Dirofilaria</i> <i>immitis</i> . S. SUN, T. MATSUURA and K. SUGANE	149-158
Book reviews	120, 148
