

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\text{\AA}M\text{S-}T\text{E}\text{X}$. Authors who are able to do so are invited to prepare their manuscripts using $T\text{E}\text{X}$. (We accept Plain $T\text{E}\text{X}$, $\text{\AA}M\text{S-}T\text{E}\text{X}$ or $L\text{A}\text{T}\text{E}\text{X}$.) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Finite dimensional H-invariant spaces K.E. Hare and J.A. Ward	353
Seiberg-Witten invariants of generalised rational blow-downs Jongil Park	363
Semi-convex functions and their subdifferentials J. Dutta, V. Vetrivel and S. Nanda	385
Metrisation of Moore spaces and abstract topological manifolds David L. Fearnley	395
Categorical equivalence of finite groups László Zádori	403
Inequalities for symmetric means, symmetric harmonic means and their applications Hsu-Tung Ku, Mei-Chin Ku and Xin-Min Zhang	409
Generic Gateaux differentiability via smooth perturbations Pando Gr. Georgiev and Nadia P. Zlateva	421
Bent polynomials over finite fields Robert S. Coulter and Rex W. Matthews	429
Smoothness of the solution of the trivial Monge-Ampère equation Vitaly Ushakov	439
A note on bump functions that locally depend on finitely many coordinates M. Fabian and V. Zizler	447
Stirring our way to Sharkovsky's theorem Seth Patinkin	453
Generalised solutions of Hessian equations Andrea Colesanti and Paolo Salani	459
Tree maps with non divisible periodic orbits Xiangdong Ye	467
On the biadjoint of Riesz-like homomorphisms on partially ordered vector spaces Gerard Buskes and Jamie Summerville	473
Primeness of the enveloping algebra of Hamiltonian superalgebras Mark C. Wilson	483
On the index of Dirac operators on arithmetic quotients Anton Deitmar	489
A note on the permutation behaviour of the Dickson polynomials of the second kind M. Henderson	499
Distance for Bézier curves and degree reduction Byung-Gook Lee and Yunbeom Park	507
An example of rank two symmetric Osserman space Zoran Rakić	517

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Towards sensitivity analysis in dynamic programming S.S. Irvine	523
Advances in quantum waveguide dynamics, with applications to physical and biological nanostructures Iain John Clark	525
