There are ways of telling when a young epilepsy patient is on Tegretol® CR.

Excellent Seizure Control.

Tegretol® CR (controlled-release carbamazepine) controls seizures in many patients—with little impact on cognitive function.^{1,2} Tegretol CR can leave many patients free to think clearly and do their best.^{1,2}

Consistent Blood Levels.

Tegretol CR delivers fewer “peaks and valleys” in blood levels than conventional Tegretol. That means fewer side effects and a more stable pattern of cognitive functioning.³

The most commonly reported side effect with carbamazepine is drowsiness. This reaction usually occurs only during the initial phase of therapy⁴ and can be minimized by using controlled-release carbamazepine (TEGRETOL® CR).¹

Convenient B.I.D. Dosing.

When initiating or switching therapy, consider Tegretol CR. It comes in easy-to-break 200mg and 400mg tablets for dosage flexibility, and offers B.I.D. dosing to enhance patient compliance.

TEGRETOL® CR.
